**S1 Fig. Hb Change Least Square Means by Treatment Arm**

S1 Fig. The least square means were calculated for Hb change using age, gender, and *rs12979860* genotype and ITPase functional activity for the 2 arms. Circles indicate the LS means, error bars indicate the 95% confidence interval of the LS-means. P= DAA + placebo; R= DAA + Ribavirin
Hb Change LSMean for Placebo Arm (P)= -0.6189 (SE=0.0961)
Hb Change LSMean for Ribavirin Arm (R)=-2.136 (SE=0.1417)
There was a significant drop in Hb levels in RBV-containing arm (P<0.001)
