

Figure S1. IFN- γ production by LPS in nude mice. A serial concentration of LPS (0, 50, 100, 200, 500, 1000 μg in 200 μL PBS /body) was i.p. injected and blood samplings were carried out at 6 h. The serum levels of IFN- γ were determined by ELISA. The data are presented as the mean \pm SEM. $n = 5$.
