

Supplemental Figure 1. Effect of auxin treatments on plateau length of *PIN3* and *PIN7* single mutants. A, B) 4-DAG seedlings of *pin3-5* (A) (in Col-0 wt background) and *pin7-1* (in Ler background) (B) remain responsive to the effect of auxin treatments on plateau length. A representative experiment is shown, for each mutant line and corresponding wt control. Error bars represent SEM ($n > 30$ LR per experiment). Statistical significance was evaluated by two-way ANOVA followed by multiple comparisons Tukey test. One ($p < 0.05$) and two asterisks ($p < 0.01$) denote statistically significant differences between NAA treatments and corresponding DMSO controls.
