

Figure S1 . Effects of rhGH administration the Expression of chemokines in peripheral LNs of arthritic mice. Chemokine mRNA from GH-treated arthritic DBA/1J and control mice was quantified by qRT-PCR. Expression is normalized to b-actin and expressed as $2^{-\Delta C_t}$. Data shown as mean \pm SD ($n = 12$). Student's t-test * $p \leq 0.05$.
