Supplemental Table S1. ICD-9-CM and ICD-10-CA codes for clinical outcomes

Variables	ICD-9-CM	ICD-10-CA
Bacteremia and sepsis	Most responsible discharge codes: 038.0, 038.10, 038.19, 038.2, 038.3, 038.41, 038.42, 038.43, 038.44, 038.49, 038.8, 038.9, 041.9	Most responsible discharge codes: A40, A41, A49.9
Catheterization	Procedure codes: 37.21, 37.22, 37.23	CCI code: 3.IP.10
Coronary artery bypass grafting	Procedure codes: 36.1, 36.2	CCI code: 1.IJ.76
Percutaneous coronary intervention	Procedure codes: 36.01, 36.02, 36.05, 36.06	CCI codes: 1.IJ.50, 1.IJ.57.GQ, 1.IL.35
Pneumonia	Most responsible discharge codes: 480.0, 480.1, 480.2, 480.8, 480.9, 481, 482.0, 482.1, 482.2, 482.9, 482.32, 482.39, 482.40, 482.82, 482.83, 482.89, 483.0, 483.1, 483.8, 484.7, 484.8, 485, 486, 487.0, 514	Most responsible discharge codes: J10.0, J12, J13, J14, J15, J16, J17, J18

Supplemental material is neither peer-reviewed nor thoroughly edited by CJASN. The authors alone are responsible for the accuracy and presentation of the material.

Supplemental Table S2. Trace element decile lower limits ($\mu\text{g/L}$) at baseline

	LDL ¹	1	2	3	4	5	6	7	8	9	10

LDL lower detection limit

¹Values below the laboratory's lower detection limit are less accurate.

²59% of the beryllium values are 0.25. These have been placed in the 10th decile bin. The 5th decile bin for beryllium contains <10% (1%) of the total values and excludes the value 0.25.

³21% of the platinum values are 0.05. These have been placed in the 10th decile bin. The 8th decile bin for platinum contains <10% (9%) of the total values and excludes the value 0.05.

⁴1 value was missing for uranium. We imputed it using its median value of 0.007.

Supplemental material is neither peer-reviewed nor thoroughly edited by CJASN. The authors alone are responsible for the accuracy and presentation of the material.

Supplemental Table S3. Unadjusted probabilities of clinical outcomes after 2 years by decile of trace element concentration

	Deciles										P-value
	1	2	3	4	5	6	7	8	9	10	
Death

Using logistic regression, only trace elements with significant linear at P <0.05 with clinical outcomes are shown. They are ordered by strength of significance. The trace elements in blue font indicate that more is associated with a negative outcome.

Supplemental material is neither peer-reviewed nor thoroughly edited by CJASN. The authors alone are responsible for the accuracy and presentation of the material.

Supplemental Table S4. Adjusted odds ratios of clinical outcomes after 2 years (and 95% CI)

Trace elements	Death	Cardiovascular events	Infection events	Hospitalizations
Participants ¹ Events	1,278 260	1,211 285	1,211 117	1,211 928
<i>Model 1 – using all deciles as a linear term</i>				
Per decile				
Arsenic	0.94 (0.89,0.99)			
Beryllium	0.93 (0.89,0.99)		1.08 (1.02,1.14)	
Caesium	1.07 (1.02,1.13)			
Copper	0.88 (0.83,0.93)			0.93 (0.88,0.97)
Selenium				1.06 (1.01,1.11)
Vanadium				
<i>Model 2 – using the lowest and highest deciles vs deciles 2-9</i>				
Lowest decile				
Selenium	3.19 (2.09,4.88)			3.52 (1.79,6.92)
Highest decile				
Barium			2.71 (1.53,4.82)	
Beryllium			2.22 (1.34,3.67)	
Cadmium	1.67 (1.08,2.58)			1.94 (1.07,3.52)
Nickel				0.52 (0.33,0.81)
<i>Model 3 – using the 5th and 95th referent percentiles vs participants in the 6th-94th percentiles</i>				
<5 th referent percentile				
Selenium	3.42 (1.17,9.96)			
>95 th referent percentile				
Copper	3.65 (1.71,7.82)			0.62 (0.44,0.88)
Selenium	0.49 (0.36,0.67)			1.92 (1.12,3.27)
Silver				1.57 (1.15,2.15)
Vanadium				

CI confidence interval

¹Only Albertan participants were included in the modeling of cardiovascular events, infection events, and hospitalizations

All three models use the forward stepwise procedure using all variables from Table 1 and Supplemental Table S3 as candidate variables. Missing values were imputed with the most frequent categorical or median continuous value. Albumin was not a candidate variable for cardiovascular events, infection events, and hospitalizations because it was only available in Albertan participants. This table shows results from 12 models (3 for each approach to modeling the trace elements X 4 for each type of outcome). Only the retained (due to significance at P<0.05) trace element variables are shown. Retained demographic and clinical characteristic variables are not shown.
