

Supplementary Table 2. Cox Regression Analysis of Factors Associated with Cancer Specific Survival in Non-Organ Confined Prostate Cancer

Variable	Univariable	
	HR (95% CI)	p value
Age	1.022 (0.909–1.148)	0.720
BMI	0.787 (0.538–1.152)	0.218
Prostate volume measure by TRUS	0.983 (0.912–1.061)	0.665
Risk classification		0.170
Low & intermediate	1 (ref)	
High	72.700 (0.159–33190)	
PSA		0.642
<20	1 (ref)	
≥20	0.044 (0.000–22547)	
Pathologic Gleason score		0.006
<8	1 (ref)	
≥8	10.092 (1.930–52.785)	
Positive surgical margin	0.662 (0.127–3.446)	0.624
PSA doubling time	0.813 (0.618–1.069)	0.139
Salvage radiotherapy	0.213 (0.041–1.102)	0.065
Early salvage ADT vs. standard salvage ADT		0.251
Delayed salvage	1 (ref)	
Early salvage	0.022 (0.00–14.719)	

ADT, androgen deprivation therapy; BMI, body mass index; PSA, prostate-specific antigen; TRUS, transrectal ultrasonography.
