

Supplementary Fig. 16: Distribution of piRNAs along the P-element in hot evolved populations. Only the 5' positions of piRNAs are considered and piRNA abundance is normalized to 1 million miRNAs (ppm). Replicates are at the top panel and the generations at the right panel. Sense piRNAs are shown on the positive y-axis and antisense piRNAs on the negative y-axis. The large peaks at positions 1164 and 1162 were truncated (total size is indicated).
