B

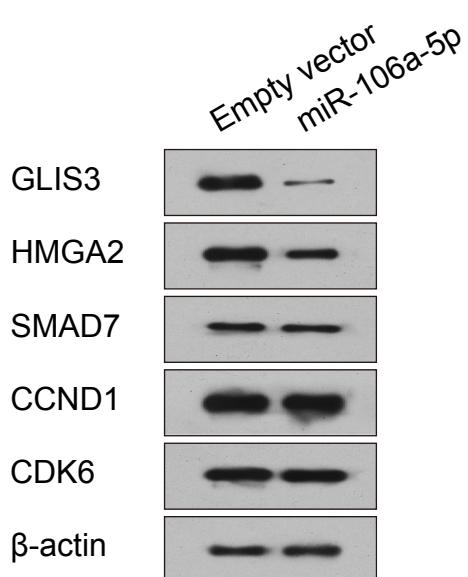

Figure S1. Potential target genes of miR-106a-5p screened. (A) Candidate target genes of miR-106a-5p were found using publicly available databases (TargetScan and miRanda). (B) Immunoblot analysis showing the expression of the candidate target genes in chondrocytes infected with miR-106a-5p.

Figure S2

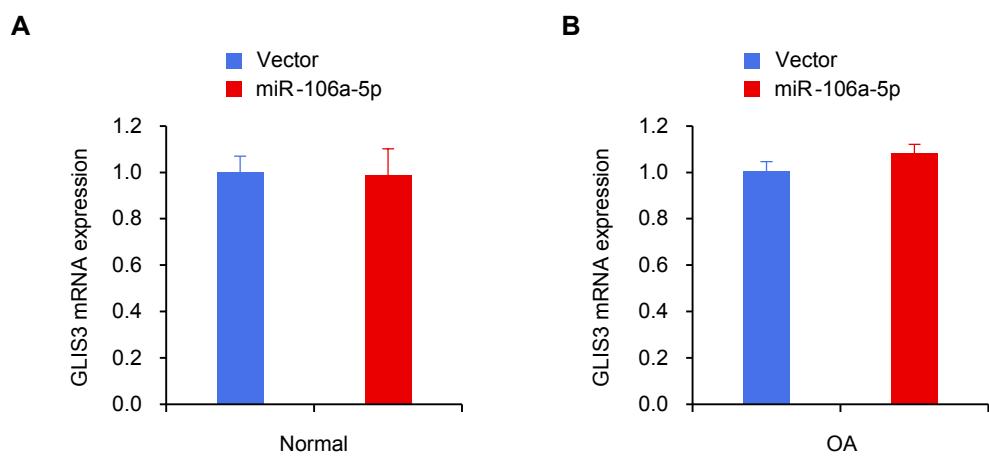

Figure S2. miR-106a-5p regulates GLIS3 expression in a posttranscriptional way. (A and B) Analysis of normal (A) and OA (B) chondrocytes transfected with scramble or miR-106a-5p mimics. The corresponding miRNA expression was determined using qRT-PCR. Each bar represents the mean of at least three independent experiments performed in triplicate \pm standard deviation. * $p < 0.05$, ** $p < 0.01$.

Table S1 Clinical and demographic characteristics of the study population*

Clinical data	
Age, years	61.2 ± 3.8
Male/ female (n)	16/24
Disease duration, years	10.2 ± 3.6
Swollen joints (n)	1.3 ± 0.2
Tender joints (n)	1.2 ± 0.6
HSS score ^a	46.7 ± 6.2
CRP, mg/dl	0.5 ± 0.3
ESR, mm/h	14.2 ± 7.1

* Data are shown as the mean ± standard deviation or absolute numbers.

^a The Hospital for Special Surgery Knee Score (HSS) was used. Scores can change from 0 to 100, with lower scores suggesting greater disease activity.

CRP, C-reactive protein; ESR, erythrocyte sedimentation rate.
