

### Supplemental Material

**Supplemental Table.** Detailed Information on Results of Standard Care in Subjects Who were Determined to have ACS with normal rCTP (score=0) and Non-Obstructive CAD on CCTA

Subject	CCTA Finding of Non-obstructive Plaque	Baseline ECG	Troponin	Stress Nuclear Perfusion Imaging	Coronary Angiography Intervention	Clinical Outcome
72-year-old man	Mid-RCA	Non-specific T-wave changes	Negative	Apical area of ischemia, hypokinesis inferolateral region	None	Unstable Angina
53-year-old man	LM and distal LAD	Non-specific T-wave changes	2 <sup>nd</sup> set positive	None	40% D2 ostium, 70% D3 ostium stenosis/ none	NSTEMI
59-year-old woman	OM1	<1mm ST-segment elevation V2-V6	Negative	None	80% PDA stenosis/stent PDA	Unstable Angina

D2=second diagonal branch; D3= third diagonal branch; NSTEMI= Non-ST segment myocardial infarction; PDA=posterior descending artery
