

**Table S4: Proportion of use of adjunctive measures/therapies during at least one day during follow-up, in immunocompetent (Control) and immunocompromised (Study) groups**

	<b>Control (n=2229)</b>	<b>Study (n=584)</b>	<b>p value</b>
<b><i>Adjunctive measure/therapy, n (%)</i></b>			
Prone positioning	152 (6.8)	47 (8.0)	0.3026
Recruitment maneuvers	414 (18.6)	121 (20.7)	0.2395
ECMO	63 (2.8)	15 (2.6)	0.7355
Renal replacement therapy	428 (19.2)	122 (20.9)	0.3596
Continuous sedation	1666 (74.7)	455 (77.9)	0.1135
Continuous NMBs	413 (18.5)	132 (22.6)	<b>0.0266</b>
Esophageal pressure monitoring	16 (0.7)	3 (0.5)	0.7797
Tracheostomy	250 (11.2)	76 (13.0)	0.2269

Abbreviations: ECMO: extra corporeal membrane oxygenation; NMB: neuromuscular blocking agent.

Note: Bold p values shows a statistically significant difference between the two groups
