

Supplemental Figure 8. Phenotypical alterations in petals of mutants deficient in ethylene reception and signal transduction.

Quantification of petal area **(A)**, length **(B)** and width **(C)**. Quantification of cell size is shown for conical petal cells **(D)** and basal cells **(E)**. Asterisks indicate a significant difference between Col0 wild type and the respective mutants, *etr1-1*, *ein2-5* and *ein3-1* ($p < 0.05$, $N=36$).
