

Supplemental Table 3: Survival after intraperitoneal endotoxin injection ¹

	N	Median survival (h)	Hazard ratio (95% CI of ratio)	p-value
Ifngr1^{-/-}	10	23.5	2.53 (0.941 – 6.78)	0.046
Il10rb^{-/-}	15	9	0.178 (0.0672 – 0.472)	<0.0001
C57BL/6J	14	15	0.630 (0.276 – 1.44)	0.031
BALB/cJ	17	20	-	-
Il4ra^{-/-}	14	15	0.273 (0.108 – 0.692)	0.014

¹ Survival times of 5 mouse strains exposed to 50 mg/kg LPS I.P. Gehan-Breslow-Wilcoxon test and Mantel-Haenszel hazard ratios were calculated in GraphPad Prism. *Ifngr1^{-/-}* and *IL10rb^{-/-}* were compared to their background strain C57BL/6J. *Il4ra^{-/-}* were compared to their background strain, BALB/cJ. C57BL/6J were compared to BALB/cJ.
