Supplementary Figure 1: Time course treatment of HopF2-BirA* with DEX

Total protein extract from HopF2-BirA* (60kDa) floated in 30 μ M DEX for 0, 8, 16, 24, 32 hrs was probed with HA-antibody (top panel) or streptavidin-HRP (bottom panel). Highest HopF2-BirA* expression and biotin labeling was observed following 24hrs treatment. Ponceau staining is presented as a loading control. (Note that the images were cropped to show relevant samples and uncropped images are available in Supplementary Figure 3).

Supplementary Figure 2: Dot plot showing total list of prey proteins identified as significant interactors of BirA* and HopF2-BirA* by SAINT analysis.

Supplementary Figure 3: Uncropped Images

(a) Images used in Figure 1a. **(b)** Images used in Figure 1b. **(c)** Images used in Figure 1c. **(d)** Images used in Supplementary Figure 1.

Supplementary Table 1: Significant Preys identified in BirA* but not in HopF2-BirA*

Preys	Common Name	Localization^{a,b}	Identified by AP-MS^{c,d}

^a Membrane or non-membrane based on subcellular localization information on Uniprot.org.

^b 43.33% of BirA*-specific preys are membrane localized

^c Identified in the AP-MS data of Hurley et al., 2014, in at least one HopF2 replicate and not in the negative control¹⁵

^d 6.59% of BirA*-specific preys were also identified by AP-MS¹⁵.

Supplementary Table 2: Significant Prey proteins common to HopF2-BirA* and BirA*

Preys	Common Name	Localization ^{a,b}	Identified by AP-MS ^{c,d}
