

FIGURE S3. HeLa-Cas9 miRNA expression of initial and uninduced versus induced. The median read count is plotted versus the log2 fold change between the average of the initial and uninduced HeLa-Cas9 LX-miR pools and the induced HeLa-Cas9 LX-miR pool. The labeled miRNAs have a greater than 4 fold decrease after induction and the red dot indicates miR-145-5p, the only miRNA whose expression changed significantly after induction (DESeq2 adjusted p-value < 0.05).
