

Supplementary Figure S1. BMV capsid protein quantification. BMV level was analyzed by western blot using an antibody against BMV coat protein. The capsid protein was normalized with Actin protein of the plants. In *N. benthamiana*, the BMV level was more in the BMV::Ubiq infected plant compared to BMV::anti-Ubiq infected plant. In sorghum, BMV level is similar in both BMV::anti-Ubiq and BMV::Ubiq infected plants.
