

Figure S1: Study design for facial morphology GWASs

We carried out a discovery GWAS for 85 facial traits in 5,643 Koreans (Phase 1) and follow-up analysis in 1,926 Koreans (Phase 2) to validate 128 candidate SNPs (discovery GWAS, $P < 5 \times 10^{-6}$). After the two-stage analysis, a meta-analysis (Phase 1+2) was performed.
