

Supplementary figure 1

Supplementary figure 1 (A) Effect of 1 day and 3 day restraint stress (09:00-11:00) on stress-induced analgesia in CD1 male mice. (B) Baseline latency on day 3. Results are expressed as mean \pm SEM, n=4. ***p<0.001 as compared to non-stressed controls. Analysis done was repeated measures mixed model analysis using InVivo Stat software.
