

Fig. S1: Survival analysis of HCC patients in the training set stratified by stage, age and tumor grade. Survival analysis compared recurrence-free survival (RFS) by recurrence risk (high vs. low) stratified by clinical characteristics. Kaplan-Meier curves for patients with stage I HCC (n=80) (A), patients with stage II HCC (n=38) (B), patients with stage III/IV HCC (n=35) (C), patients aged 65 years or younger (n=103) (D), patients aged older than 65 years (n=50) (E), patients with grade I tumor (n=25) (F), patients with grade II tumor (n=69) (G), patients with grade III/IV tumor (n=59) (H). The “+” symbols in the panel indicate censored data.

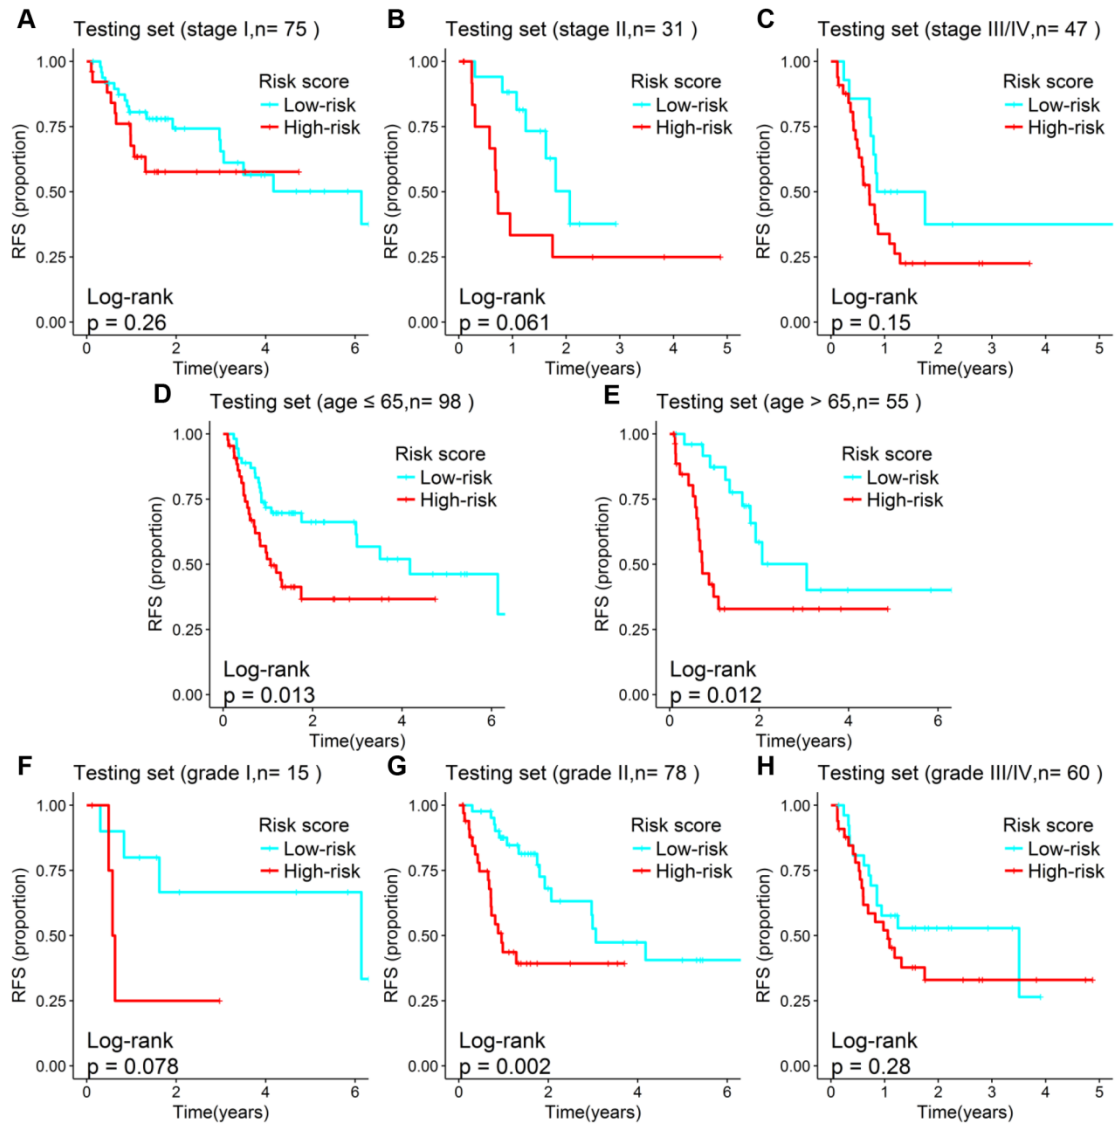

Fig. S2: Survival analysis of HCC patients in the testing set stratified by stage, age and tumor grade. Survival analysis compared recurrence-free survival (RFS) by recurrence risk (high vs. low) stratified by clinical characteristics. Kaplan-Meier curves for patients with stage I HCC (n=75) (A), patients with stage II HCC (n=31) (B), patients with stage III/IV HCC (n=47) (C), patients aged 65 years or younger (n=98) (D), patients aged older than 65 years (n=55) (E), patients with grade I tumor (n=15) (F), patients with grade II tumor (n=78) (G), patients with grade III/IV tumor (n=60) (H). The “+” symbols in the panel indicate censored data.

Fig. S3: Association between six-miRNA signature and OS of HCC patients in different sets. Kaplan-Meier curves of OS between high- and low-risk patients in training set (A), testing set (B), and entire TCGA set (C). The “+” symbols in the panel indicate censored data.

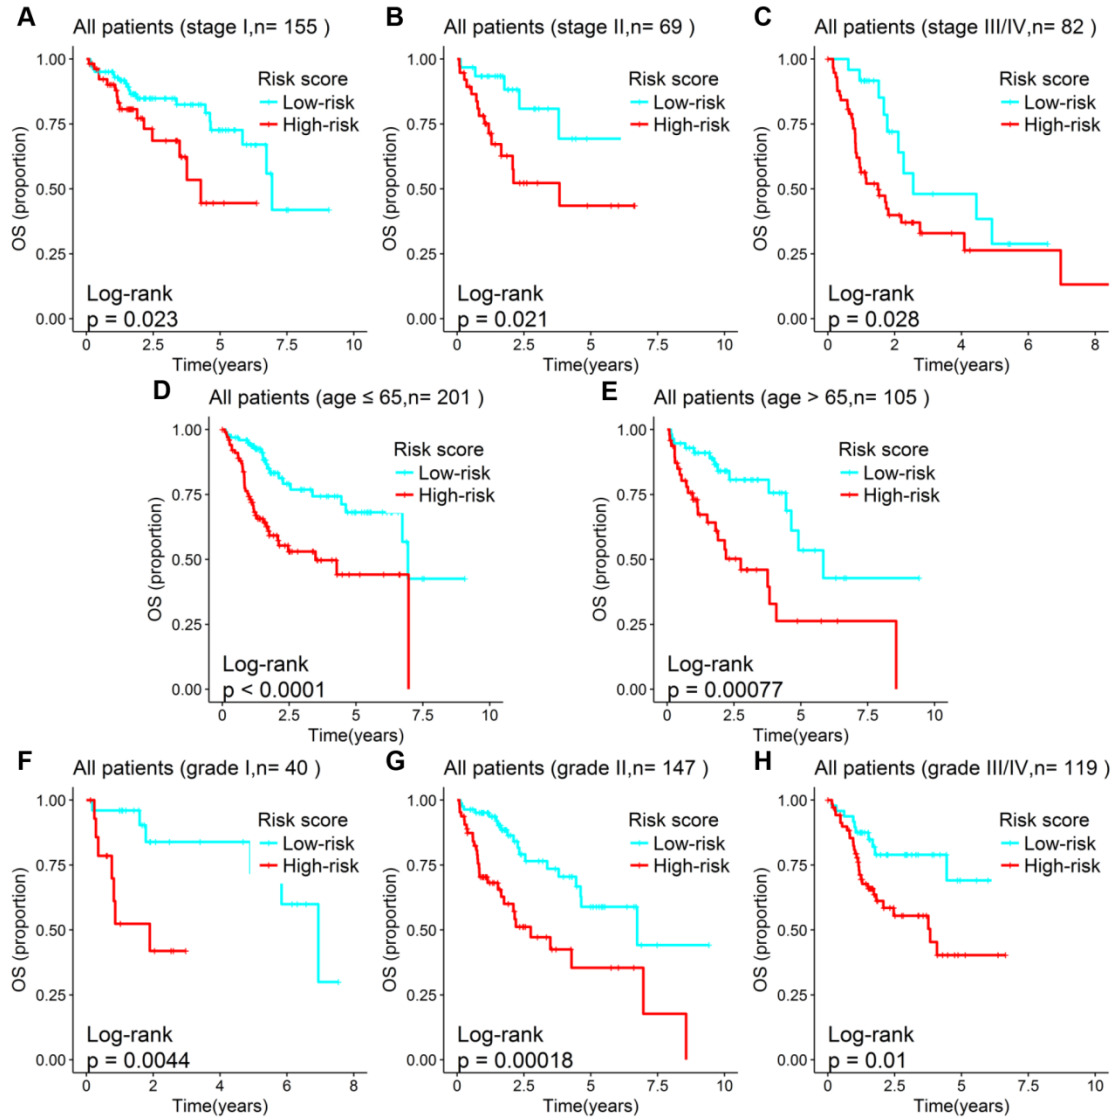

Fig. S4: Stratified analysis of association between six-miRNA signature and OS of all HCC patients. Kaplan-Meier curves for patients with stage I HCC (n=155) (A), patients with stage II HCC (n=69) (B), patients with stage III/IV HCC (n=82) (C), patients aged 65 years or younger (n=201) (D), patients aged older than 65 years (n=105) (E), patients with grade I tumor (n=40) (F), patients with grade II tumor (n=147) (G), patients with grade III/IV tumor (n=119) (H). The “+” symbols in the panel indicate censored data.

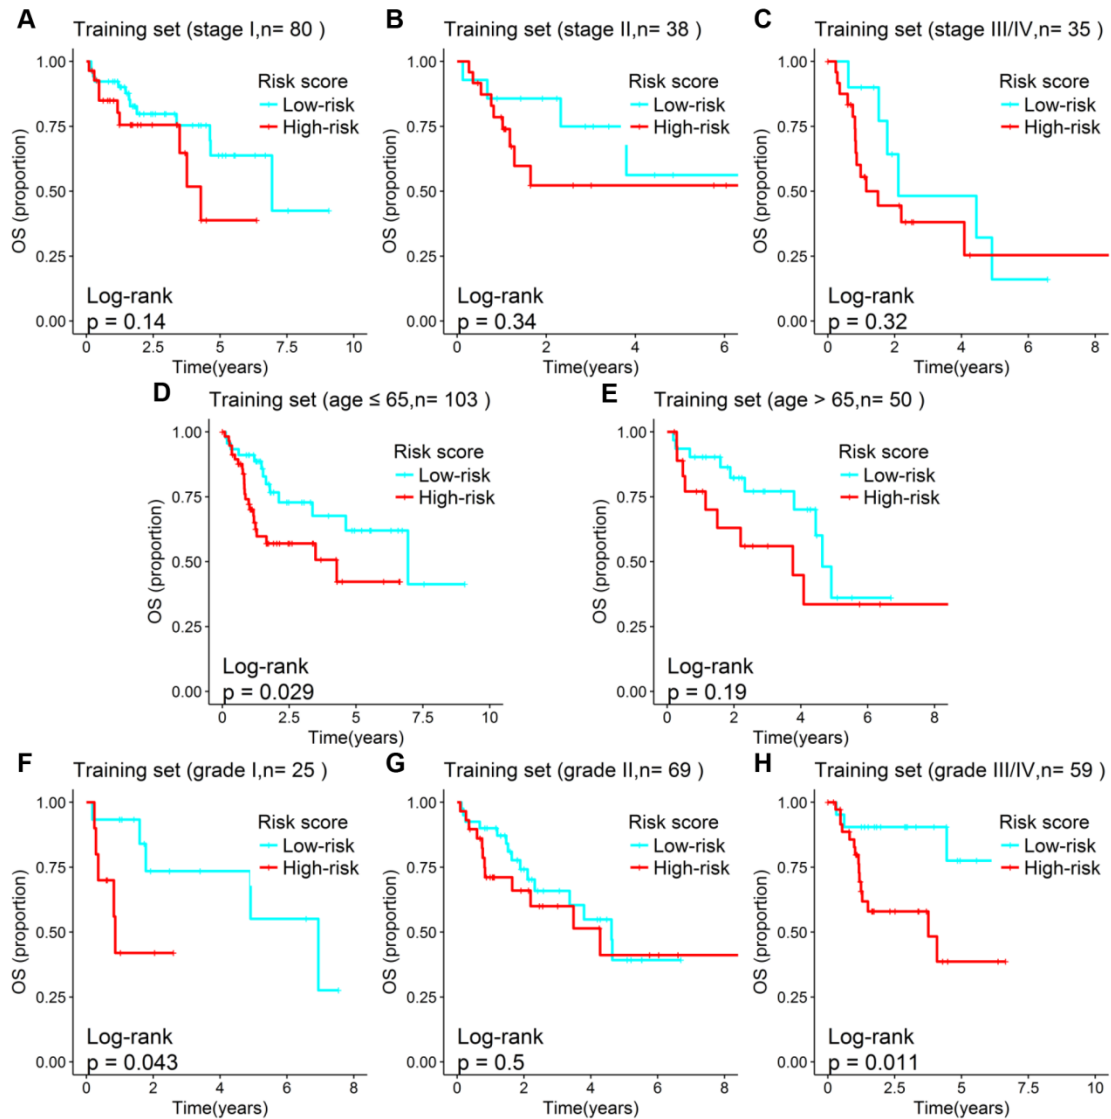

Fig. S5: Stratified analysis of association between six-miRNA signature and OS of HCC patients in the training set. Kaplan-Meier curves for patients with stage I HCC (n=80) (**A**), patients with stage II HCC (n=38) (**B**), patients with stage III/IV HCC (n=35) (**C**), patients aged 65 years or younger (n=103) (**D**), patients aged older than 65 years (n=50) (**E**), patients with grade I tumor (n=25) (**F**), patients with grade II tumor (n=69) (**G**), patients with grade III/IV tumor (n=59) (**H**). The “+” symbols in the panel indicate censored data.

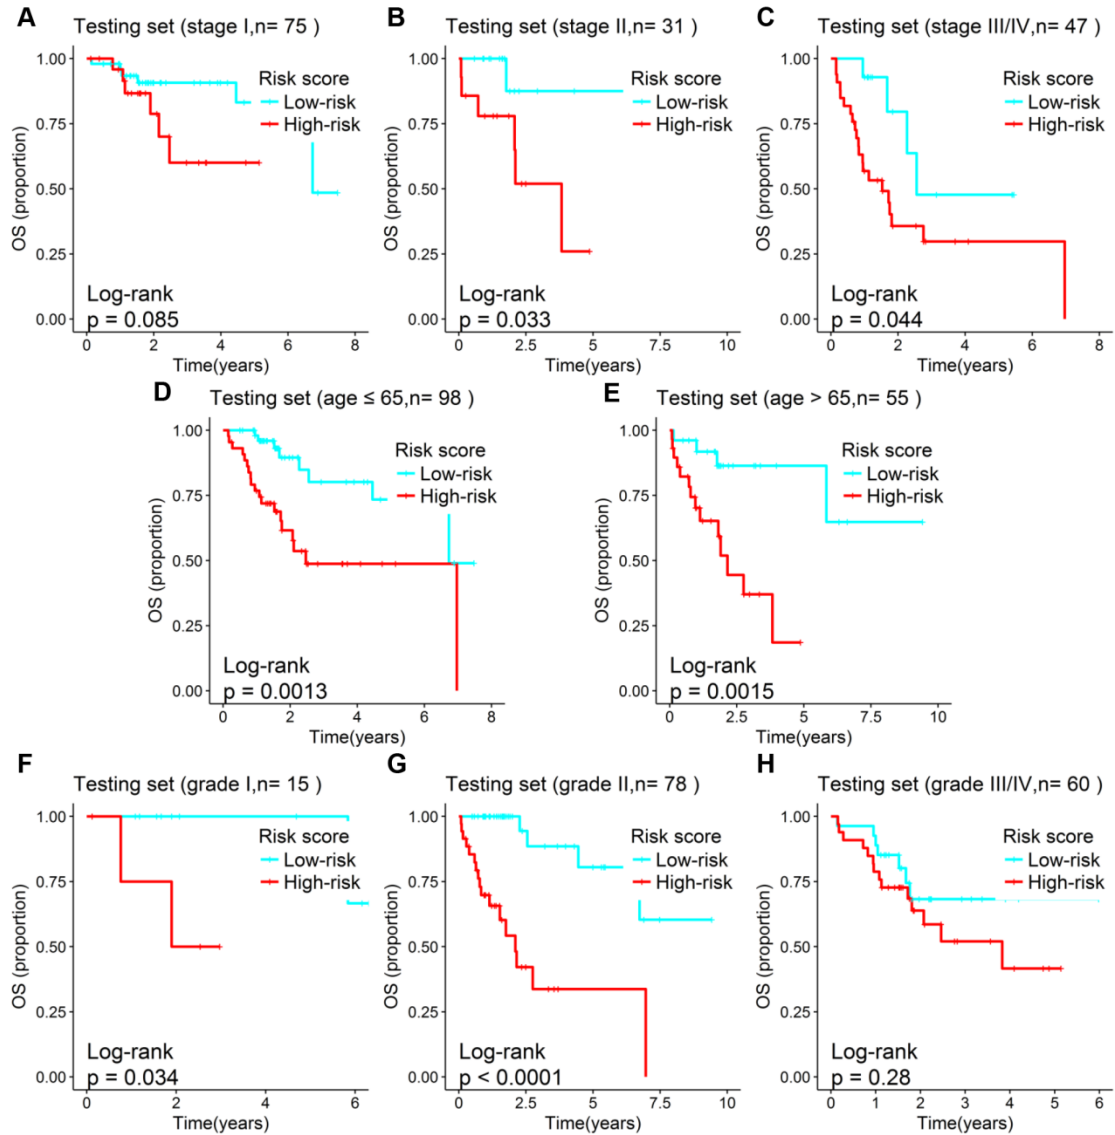

Fig. S6: Stratified analysis of association between six-miRNA signature and OS of HCC patients in the testing set. Kaplan-Meier curves for patients with stage I HCC (n=75) (A), patients with stage II HCC (n=31) (B), patients with stage III/IV HCC (n=47) (C), patients aged 65 years or younger (n=98) (D), patients aged older than 65 years (n=55) (E), patients with grade I tumor (n=15) (F), patients with grade II tumor (n=78) (G), patients with grade III/IV tumor (n=60) (H). The “+” symbols in the panel indicate censored data.

Fig. S7: Performance assessment of the six-miRNA signature by survival ROC analysis. Receiver operating characteristic (ROC) analysis of the six-miRNA signature for prediction of overall survival (OS) at 3, 5, and 7 years in the training set (A), the testing set (B), and the entire set (C).

Table S1. Baseline demographic and clinical features of HCC patients in training and testing set

| Characteristic | Training set (n=153) | Testing set (n=153) | p-value |
|--------------------------------|---------------------------------|--------------------------------|--------------------|
| Sex | | | 0.901 ^a |
| | Male | 108 | 106 |
| | Female | 45 | 47 |
| Age, years (mean±SD) | 58.8 ±13.0 | 58.6±12.8 | 0.884 ^b |
| Tumor stage | | | 0.42 ^a |
| | Stage I | 80 | 75 |
| | Stage II | 38 | 31 |
| | Stage III | 33 | 45 |
| | Stage IV | 2 | 2 |
| Tumor grade | | | 0.321 ^a |
| | G I | 25 | 15 |
| | G II | 69 | 78 |
| | G III | 52 | 55 |
| | G IV | 7 | 5 |
| AJCC TNM staging system | | | |
| T stage | | | 0.458 ^a |
| | T1 | 80 | 76 |
| | T2 | 39 | 32 |
| | T3 | 29 | 40 |
| | T4 | 5 | 5 |
| N stage | | | 0.624 ^a |
| | N0 | 113 | 118 |
| | N1 | 1 | 2 |
| | Nx | 39 | 33 |
| M stage | | | 0.808 ^a |
| | M0 | 120 | 114 |
| | M1 | 2 | 2 |
| | Mx | 31 | 37 |

^achi-square test; ^bStudent *t*-test; SD: standard deviation

HCC, hepatocellular carcinoma; AJCC, American Joint Committee on Cancer

Tumor stage: AJCC pathological stage; Tumor grade: neoplasm histologic grade

T stage: tumor size; N stage: lymph node involvement; M stage: Metastasis status

Table S2. Multivariable Cox regression analysis of OS in HCC patients in the training, testing, and entire sets

| Characteristic | Multivariable analysis | | | |
|-----------------------------|------------------------|-------|--------------|-------------------|
| | | HR | 95% CI of HR | p-value |
| Training set (n=153) | | | | |
| Risk score | | 1.594 | 1.272-1.996 | <0.0001 |
| Sex | Female/Male | 1.073 | 0.605-1.904 | 0.810 |
| Age, years | ≥65 /<65 | 1.028 | 0.572-1.848 | 0.925 |
| Tumor stage | III.IV/I.II | 1.860 | 1.007-3.436 | 0.048 |
| Tumor grade | III.IV/I.II | 0.96 | 0.384-1.259 | 0.231 |
| T stage | T3.T4/T1.T2 | NA | NA | NA |
| N stage | non-N0/N0 | 0.921 | 0.421-2.017 | 0.837 |
| M stage | non-M0/M0 | 1.706 | 0.791-3.678 | 0.173 |
| Testing set (n=153) | | | | |
| Risk score | | 1.622 | 1.227~2.143 | 0.0006 |
| Sex | Female/Male | 0.950 | 0.496-1.819 | 0.878 |
| Age, years | ≥65 /<65 | 1.364 | 0.711-2.616 | 0.350 |
| Tumor stage | III.IV/I.II | 0.641 | 0.074-5.551 | 0.687 |
| Tumor grade | III.IV/I.II | 1.122 | 0.569-2.210 | 0.740 |
| T stage | T3.T4/T1.T2 | 5.508 | 0.604-50.258 | 0.130 |
| N stage | non-N0/N0 | 1.442 | 0.649-3.203 | 0.369 |
| M stage | non-M0/M0 | 2.062 | 0.973-4.370 | 0.059 |
| Entire set (n=306) | | | | |
| Risk score | | 1.646 | 1.393~1.945 | <0.0001 |
| Sex | Female/Male | 0.998 | 0.658-1.512 | 0.991 |
| Age, years | ≥65 /<65 | 1.110 | 0.734-1.677 | 0.622 |
| Tumor stage | III.IV/I.II | 0.599 | 0.076-7.749 | 0.627 |
| Tumor grade | III.IV/I.II | 0.860 | 0.556-1.331 | 0.500 |
| T stage | T3.T4/T1.T2 | 4.011 | 0.500-32.137 | 0.191 |
| N stage | non-N0/N0 | 1.206 | 0.703-2.701 | 0.496 |
| M stage | non-M0/M0 | 1.740 | 1.033-2.932 | 0.037 |

HR, hazard ratio; CI, confidence interval

HCC, hepatocellular carcinoma; OS, overall survival

Tumor grade: neoplasm histologic grade; Tumor stage: AJCC pathological stage

T stage: tumor size; N stage: lymph node involvement; M stage: Metastasis status
