Supplementary Figure 1. Distributions of DNA copy number/gene expression Pearson correlation coefficients in three squamous tumors. Histograms of CN/GE correlations in CESC (A), HNSC (B), and LUSC (C) exhibit bimodal features. Density curves in each panel correspond to two normal distributions $N(\mu_1,\sigma_1)$ and $N(\mu_2,\sigma_2)$ using parameter estimates produced by the mixtools R package. Vertical dashed lines in each panel correspond to the value $\mu_2+\sigma_2$ in each tumor type.
