33

638

Table S1. Clinical characteristics for subjects included in third trimester placental analyses (*n* = 36).

	Preeclampsia (*n* = 23)	Healthy pregnancy (*n* = 13)
Baseline characteristics		
Maternal age, years	30 (6)[a]	32 (5)[a]
Primiparae, *n* (%)	12 (52)[b,*]	1 (8)[b]
Characteristics at delivery		
Body mass index, kg/m^2	29 (8)[b]	29 (6)[b]
Systolic blood pressure, mmHg	151 (12)[a,*]	119 (9)[a]
Diastolic blood pressure, mmHg	100 (8)[a,*]	71 (9)[a]
Gestational age delivery, weeks	32 (4)[b,*]	39 (1)[b]
Placental weight, g	350 (193)[b,*]	580 (241)[b]
Fetal birth weight, g	1780 (995)[b,*]	3590 (630)[b]
FGR, *n* (%)	12 (52)[b]	n.a.
Severe preeclampsia[†], *n* (%)	16 (70)[b]	n.a.

Continuous variables are presented as mean with standard deviation (a) or median with interquartile range (b). FGR, fetal growth restriction; n.a.; not applicable.

Comparisons between outcome groups (two-sided T-tests or Mann-Whitney U-test for continuous variables, Chi-square test for categorical variables): * *P* < 0.05 vs healthy pregnancies. †Preeclampsia was sub-phenotyped as severe if diagnosed with one or more features (40, 64).
