

Figure S3: Expression of Dendra-2 (green) from the promoter of *amt₁* (MSMEG_2425) in *M. smegmatis* biofilms after 4-days of growth in microfluidic device. *M. smegmatis* cells were constitutively expressing mCherry. The image in the mainframe shows maximum intensity projection of Dendra-2 (green) and mCherry (red) signals across z-stacks of biofilms. Orthogonal projections across the z-axis of two sides are shown in the insets.
