

Supplementary Figure 2. Protein levels of Beclin-1 and LC3-II/LC3-I were unaltered following three pregnancies in S10F-Hsp20 hearts. (A) Representative western blots of Beclin-1 and LC3-II/LC3-I protein levels in NTG and S10F hearts following three pregnancies. (B) Quantitative analysis of Beclin-1 and LC3-II/LC3-I protein levels after normalization to the loading control, GAPDH. Values represent mean \pm SEM; $n=3$ per group.
