

Additional File 1. The rate of water loss from detached rosettes. Rosettes were obtained from four-week-old plants and placed at a laboratory bench (approximately 50% relative humidity). Weight loss was calculated based on the initial mass. Values show average \pm SD ($n > 3$). Asterisks indicate significant differences from the wild type using Student's t-test (* $P < 0.05$; ** $P < 0.01$).
