2 **Fig. S7. Identification of potential ligands sensed by Pfl01_2295.** Shown are the results of

3 biofilm assays with the indicated strains. For each panel, the presence and absence of each

4 organic acid was compared for each biofilm assay. Panel A = +/- isocitrate; B = +/- pyruvate; C =

5 +/- fumarate. Biofilm assays are representative of six biological replicates $P < 0.001$ (***).
