19 Table S1: Summary of α -diversity indices.

Category	Sample Type (# of samples)	α -Diversity, mean (standard deviation)		
		Chao1	Shannon	observed OTUs
Environmental samples	Dry Weather Water (43)	534 (122)	6.0 (0.9)	343 (77)
	Rising Limb (15)	772 (133)	6.8 (0.6)	508 (100)
	Peak Flow (32)	753 (127)	6.9 (0.6)	509 (98)
	Declining Limb (19)	715 (127)	6.7 (0.6)	478 (91)
	Streambed Sediment (45)	729 (119)	7.1 (0.6)	523 (95)
	Holmes Lake Water (19)	400 (100)	5.6 (0.6)	265 (51)
	Storm Drain Outfall Water (24)	685 (139)	6.5 (0.9)	456 (101)
	Street Sweepings (3)	693 (46)	7.3 (0.3)	511 (17)
	Erodible Soil (20)	670 (115)	7.7 (0.6)	519 (71)
	Embankment Soil (49)	634 (100)	7.8 (0.4)	511 (72)
Fecal samples	Sanitary Sewage (7)	259 (38)	4.8 (0.2)	179 (19)
	Duck Feces (4)	234 (83)	3.7 (0.9)	143 (59)
	Pigeon Feces (3)	223 (66)	3.8 (0.6)	136 (50)
	Goose Feces (5)	190 (88)	4.3 (0.4)	114 (49)
	Horse Feces (4)	185 (41)	5.9 (0.3)	140 (13)
	Small Mammal Feces (4)	176 (73)	4.1 (0.7)	121 (50)
	Swallow Feces (6)	157 (75)	3.2 (1)	94 (35)
	Dog Feces (4)	115 (81)	3.6 (0.5)	80 (51)

20

21 Table S2: Summary of water quality parameters for water collected from Antelope Creek.

Water Quality Parameters	Dry Weather ¹ (n = 43)	Wet Weather ¹		
		Rising Limb (n = 15)	Peak Flow (n = 32)	Declining Limb (n = 19)
NH ₃ -N (mg/L)	0.08 (0.09)	0.30 (0.30)	0.40 (0.20)	0.20 (0.30)
TKN (mg/L)	1.0 (0.4)	4.0 (2)	3.0 (1)	2.0 (0.5)
NO ₃ -N (mg/L)	0.6 (0.8)	0.6 (0.1)	0.6 (0.1)	0.5 (0.4)
SRP (mg/L)	0.2 (0.1)	0.2 (0.1)	0.2 (0.09)	0.2 (0.1)
TP (mg/L)	0.30 (0.10)	0.80 (0.50)	0.60 (0.20)	0.30 (0.09)
<i>E. coli</i> (CFU/100 mL)	2,000 (3,000)	50,000 (40,000)	70,000 (50,000)	60,000 (90,000)
Turbidity (NTU)	20 (10)	70 (60)	80 (40)	30 (10)
Chloride (mg/L)	20 (20)	10 (8)	8 (4)	10 (4)
TSS (mg/L)	30 (90)	400 (300)	300 (200)	40 (40)
COD (mg/L)	20 (10)	60 (40)	70 (50)	40 (30)

22 ¹Mean (Standard Deviation)

23 Table S3: Summary of the relative abundance of major families (i.e., relative abundance $\geq 0.1\%$) in various sample types.

Sample Type	Phylum	Class	Order	Family	Relative Abundance (%)
Dry Weather Water	Actinobacteria	Actinobacteria	Actinomycetales	ACK-M1	6.4
	Bacteroidetes	[Saprospirae]	[Saprospirales]	Chitinophagaceae	4.9
		Bacteroidia	Bacteroidales	Other	0.1
		Flavobacteriia	Flavobacteriales	Flavobacteriaceae	4.3
	Cyanobacteria	Oscillatoriothycideae	Chroococcales	Microcystaceae	5.1
	Firmicutes	Bacilli	Bacillales	[Exiguobacteraceae]	0.2

38 **FIGURES**

39

40 Figure S1: Hydrographs showing the times of sampling during the six wet weather events, one in

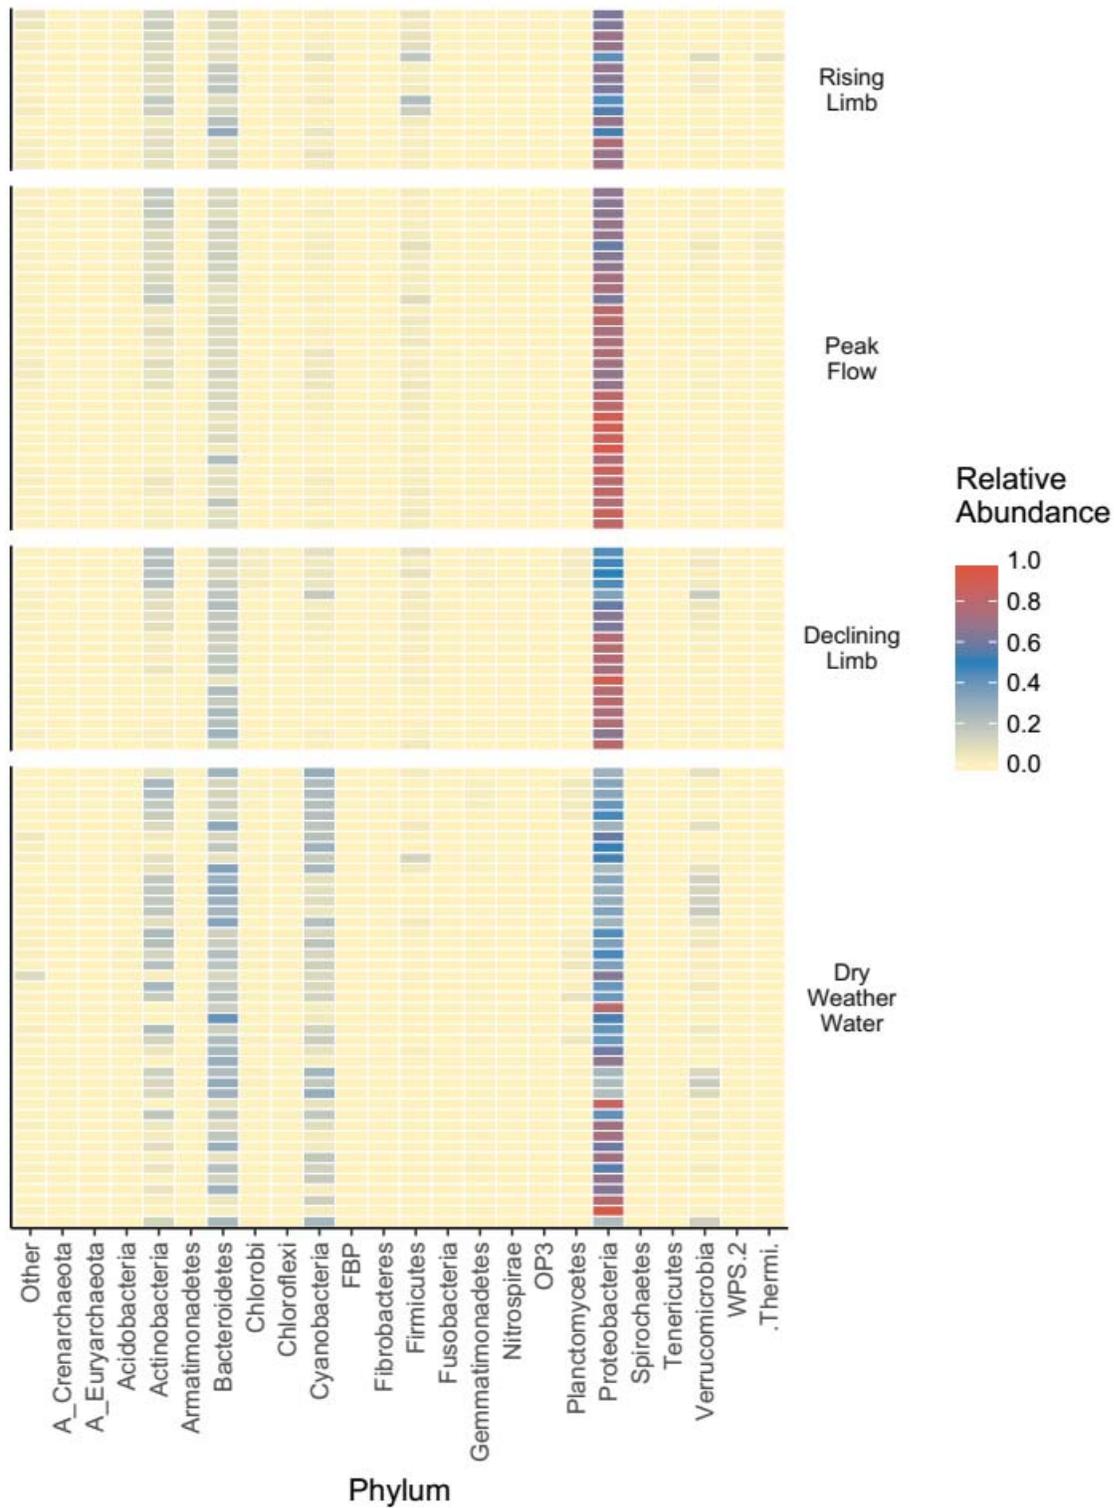

41 2013, two in 2014, and three in 2015.

42

43 Figure S2: Rarefaction curve showing the number of OTUs observed at different rarefaction

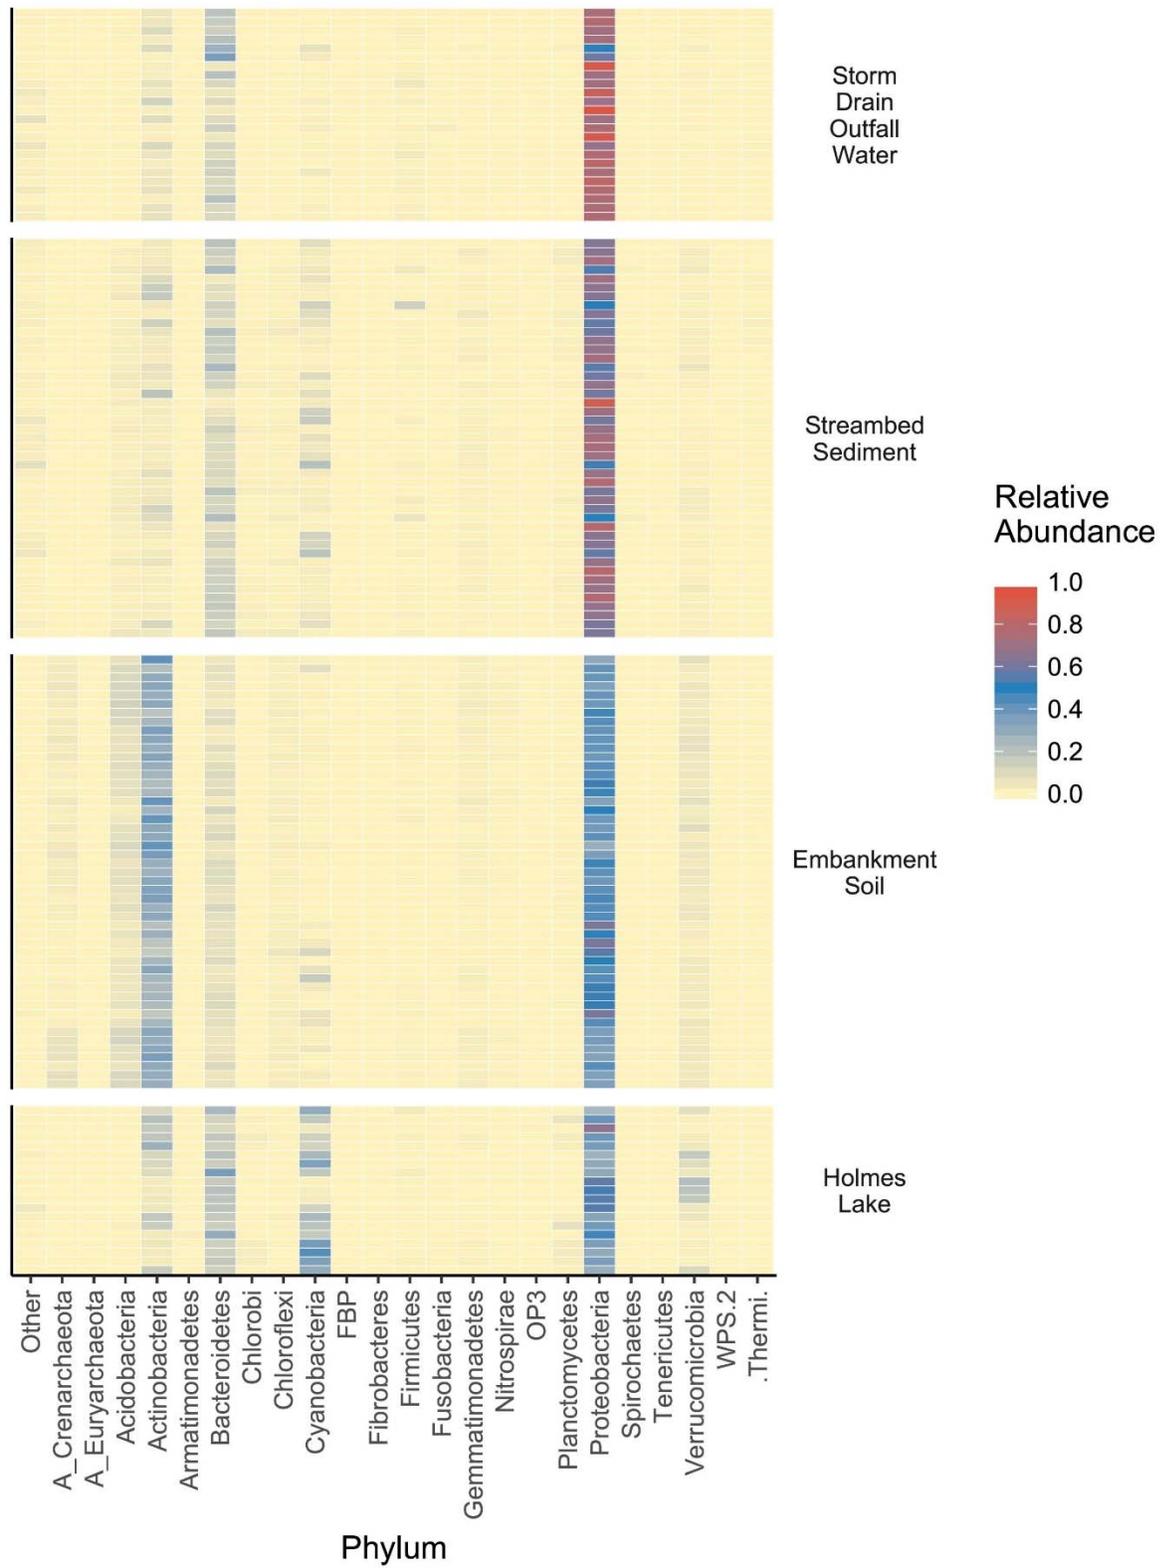

44 depths. Error bars represent 95% confidence interval.

45

46 Figure S3: Heat map showing the relative abundance of major phyla in individual dry and wet

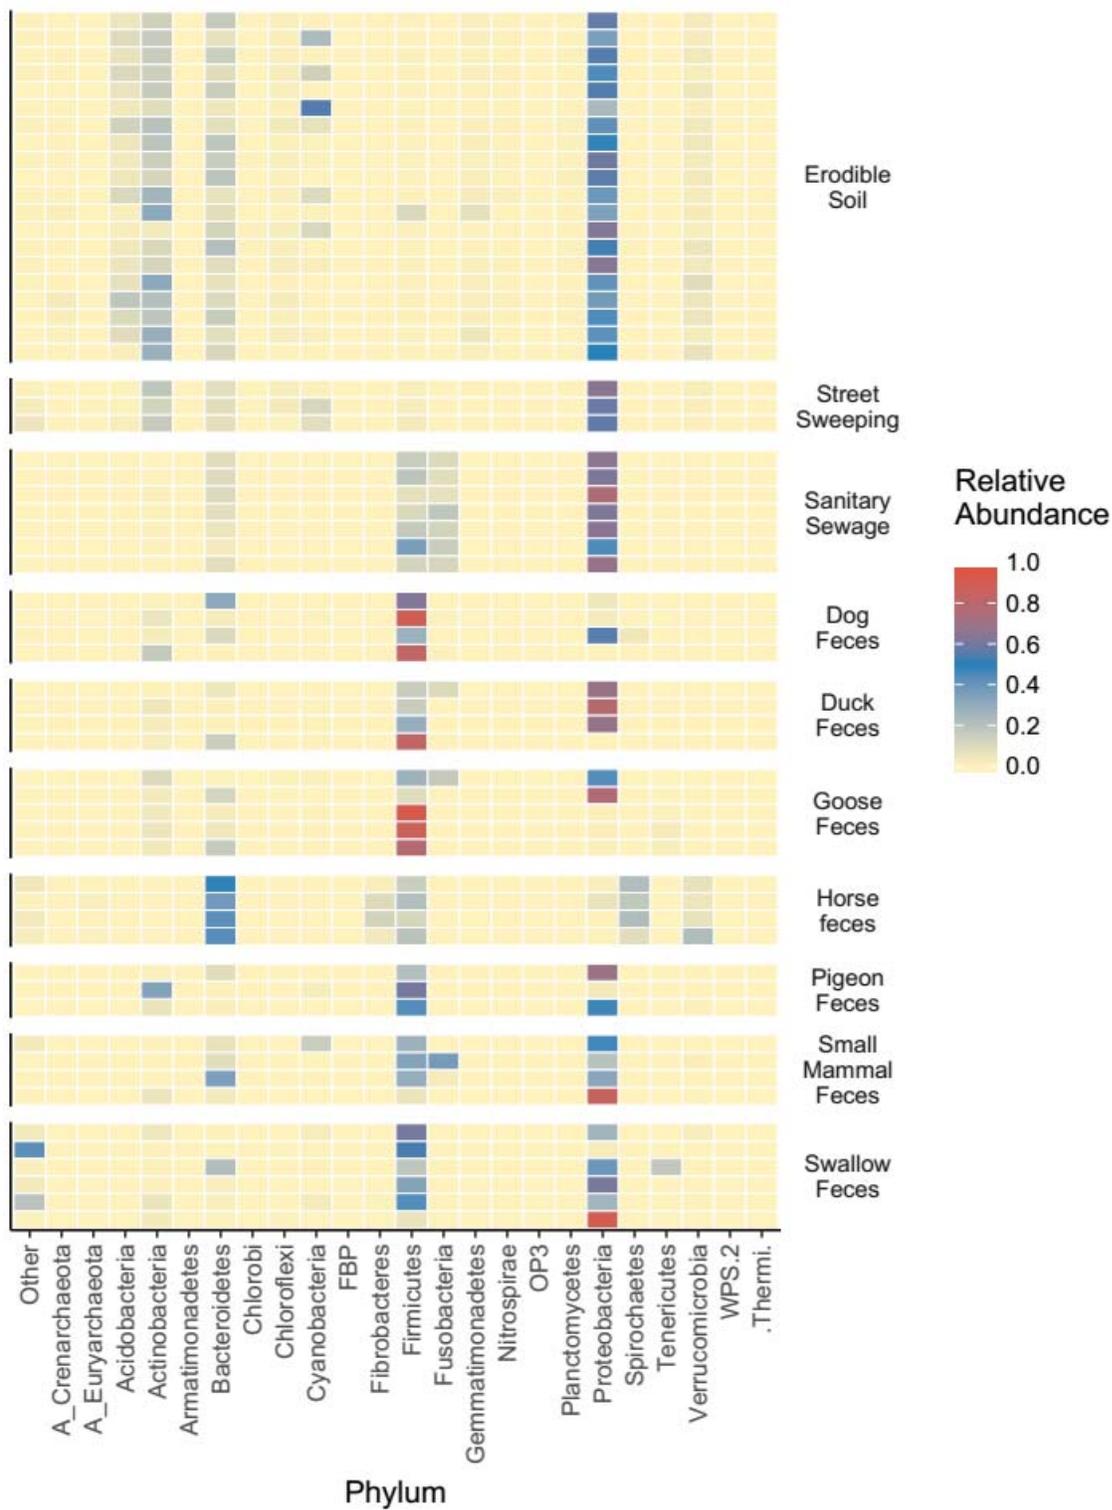

47 weather water samples.

48

49 Figure S4: Heat map showing the relative abundance of major phyla in individual storm drain

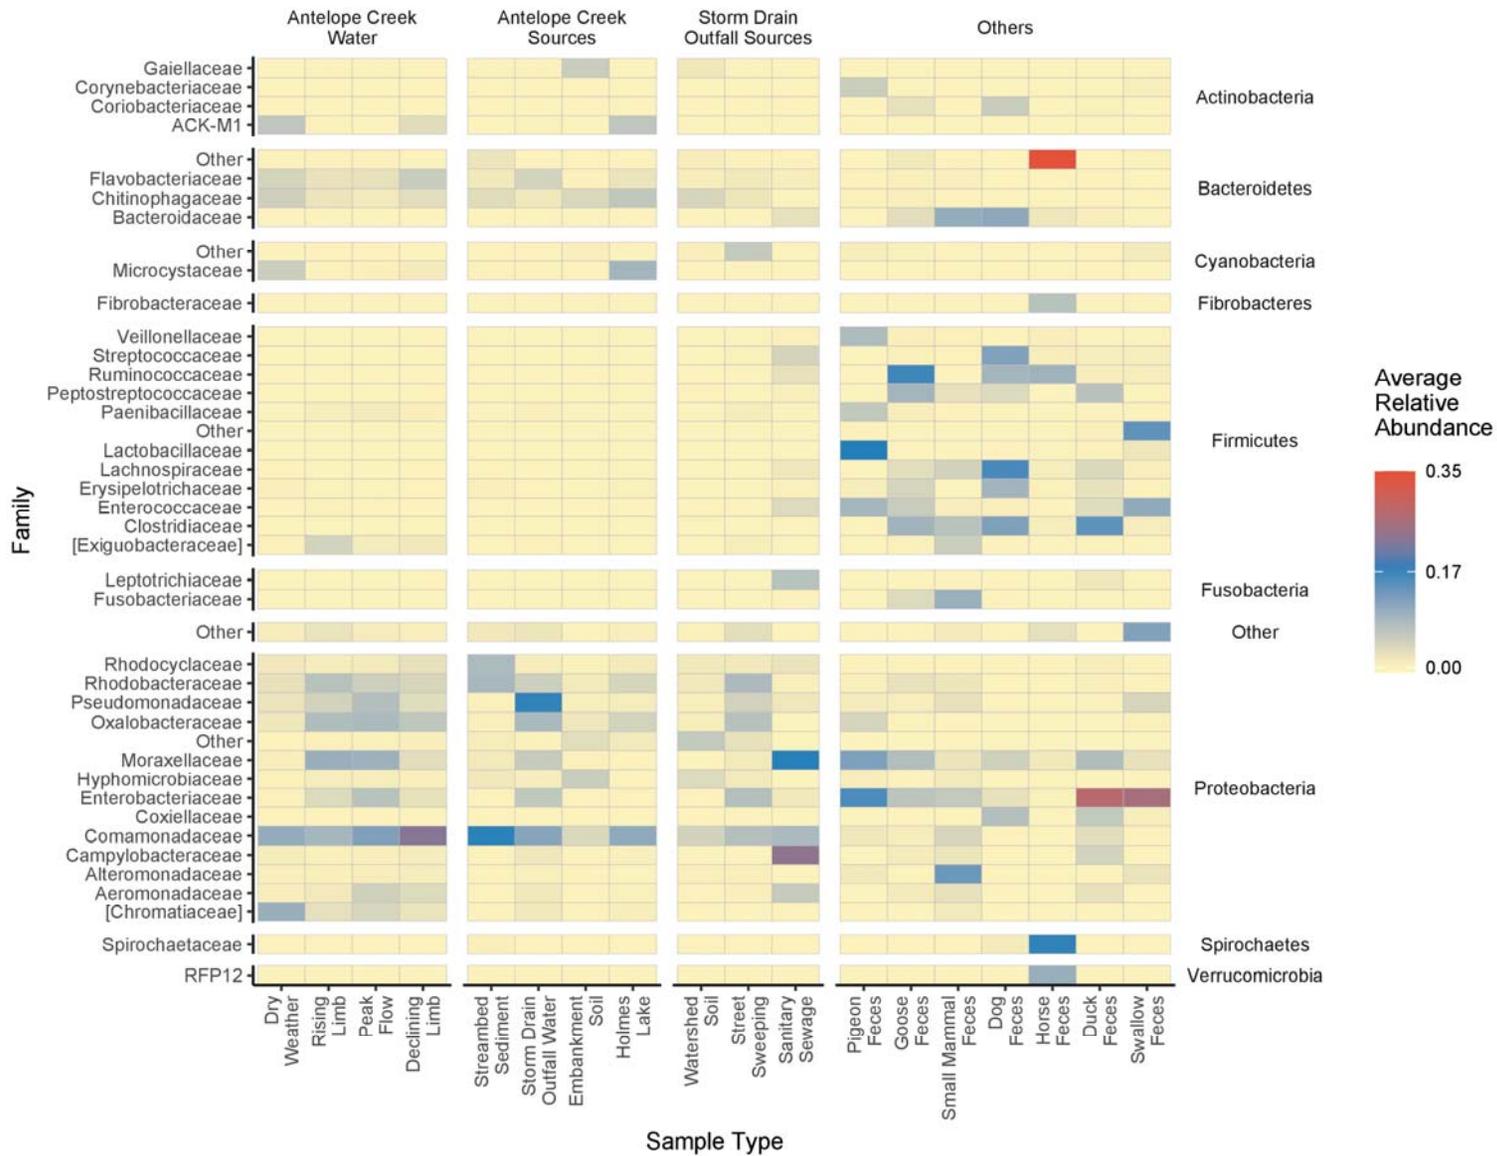

50 outfall, streambed sediment, embankment soil, and Holmes Lake samples.

51

52 Figure S5: Heat map showing the relative abundance of major phyla in individual erodible soil,

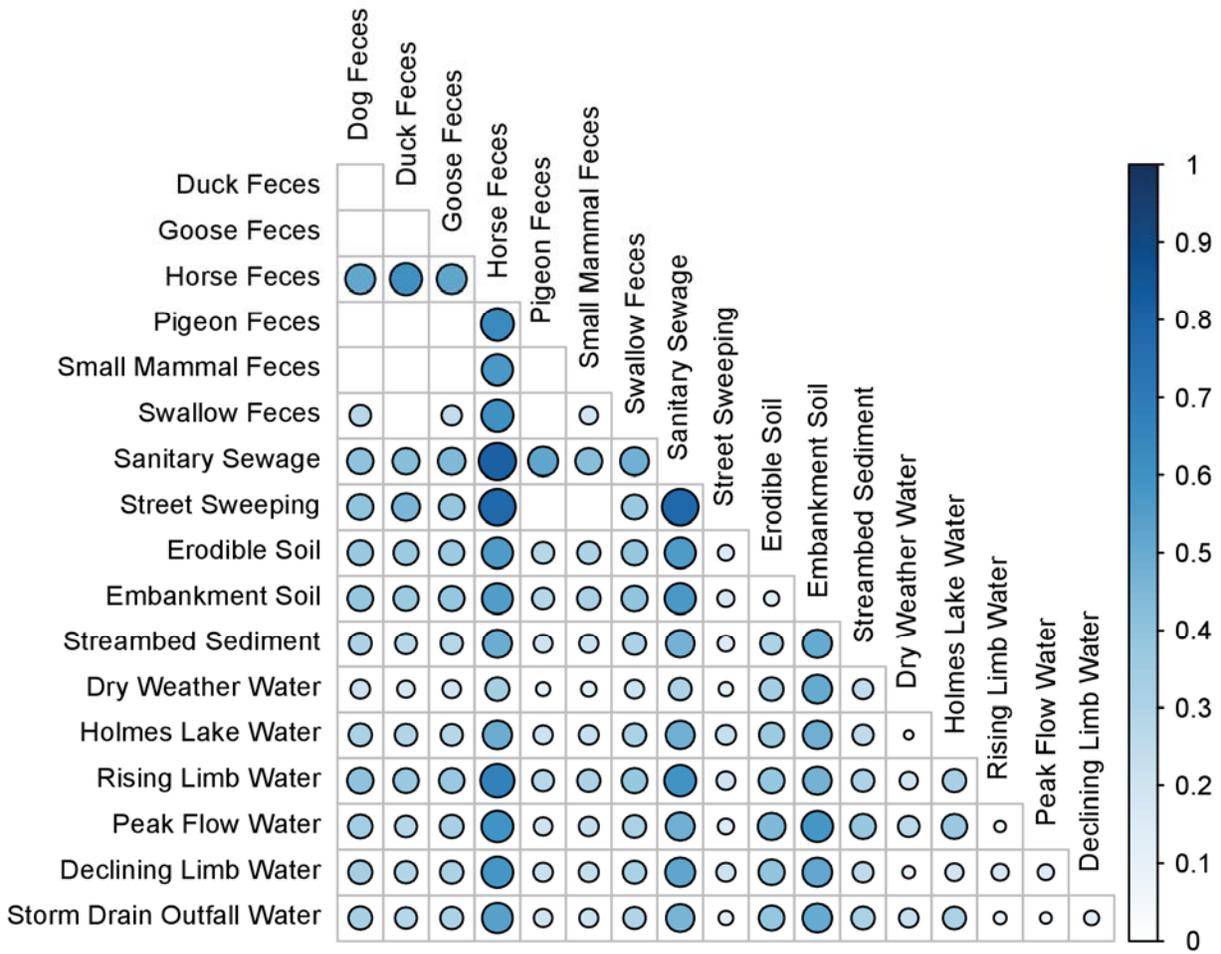

53 street sweeping and fecal samples.

54

55

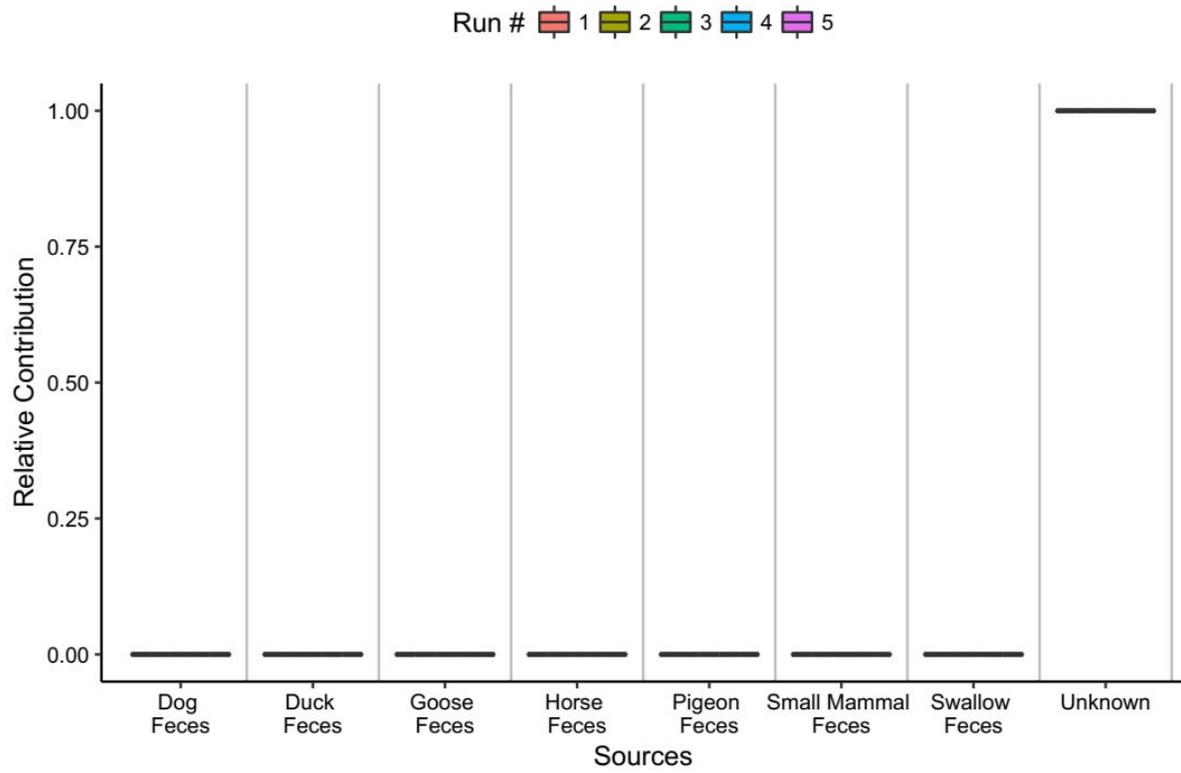

Figure S6: Heat map showing the families with relative abundance $\geq 0.5\%$ in at least one sample type.

56

57 Figure S7: Results of PERMANOVA based on weighted UniFrac distance showing the
 58 comparison of microbial composition between different sample types. Size and color of the
 59 circles both represent R^2 value. Circles are shown only for significant R^2 (Benjamini &
 60 Hochberg adjusted $p < 0.05$).

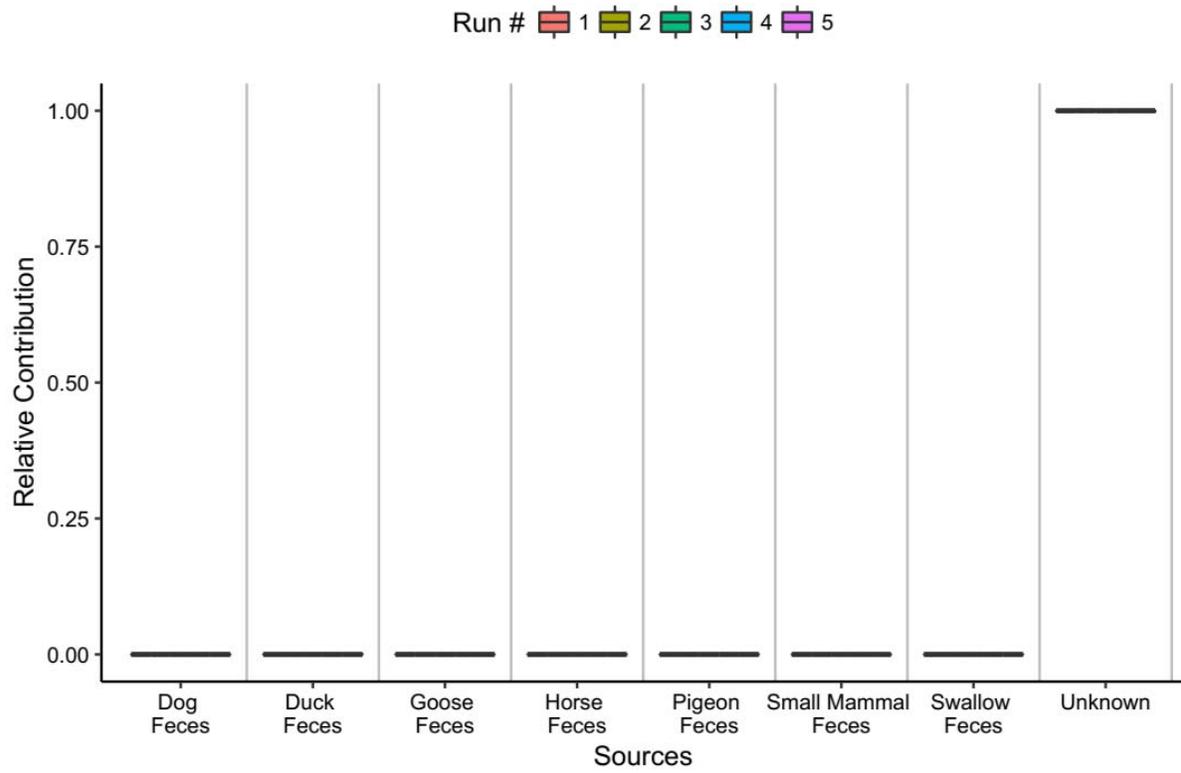

Embankment Soil

61

62 Figure S8: Five runs of SourceTracker analysis showing the relative contributions of potential
63 fecal sources to the overall microbial community in embankment soil.

Erodible Soil

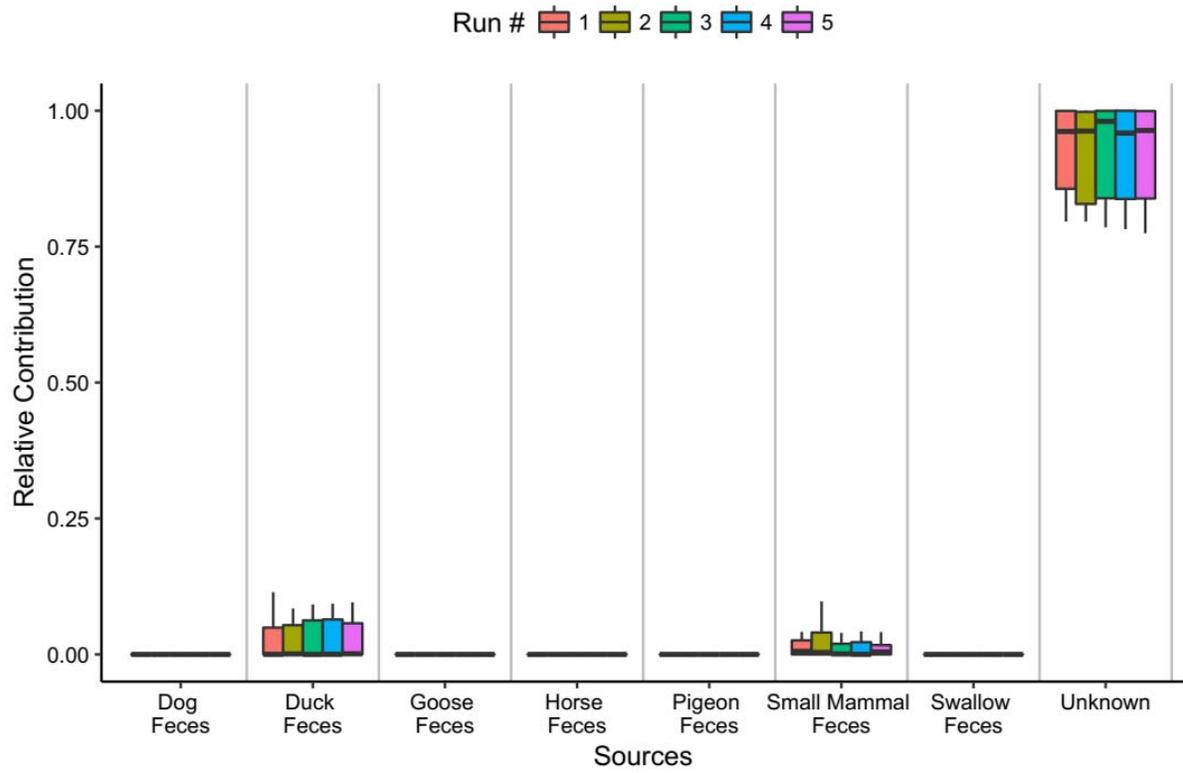

64

65 Figure S9: Five runs of SourceTracker analysis showing the relative contributions of potential

66 fecal sources to the overall microbial community in erodible soil.

Holmes Lake

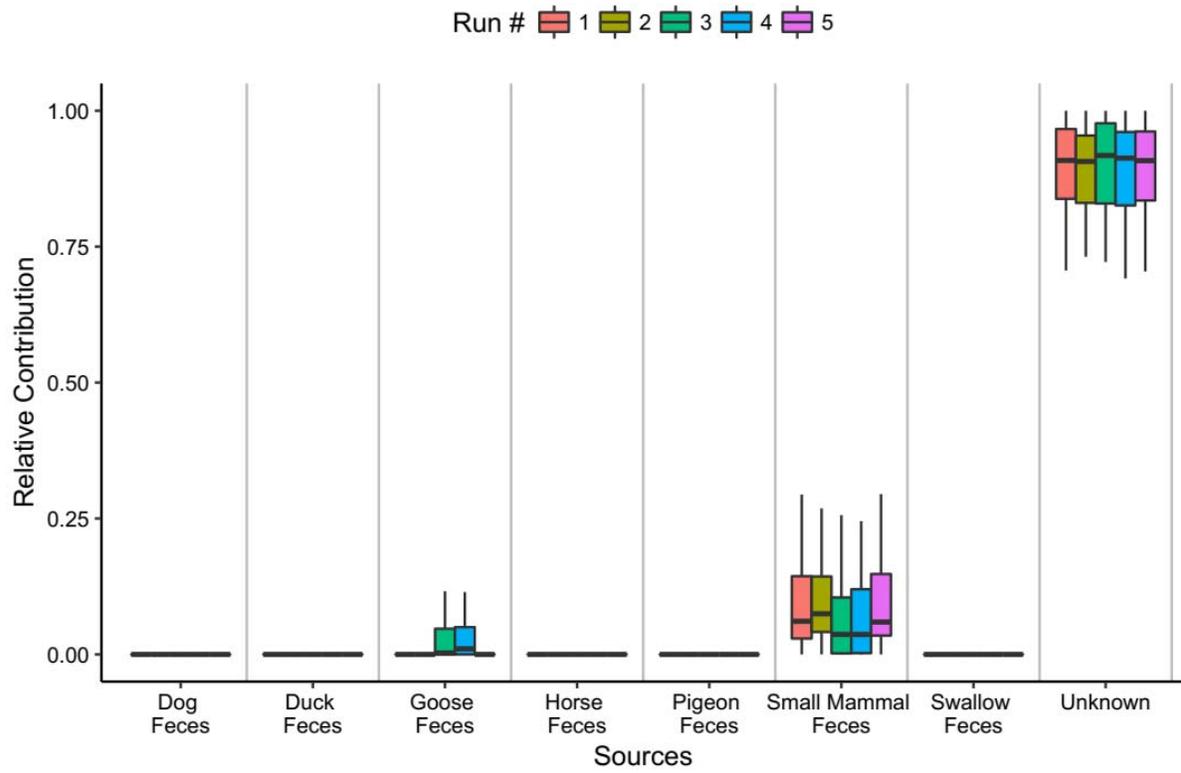

67

68 Figure S10: Five runs of SourceTracker analysis showing the relative contributions of potential

69 fecal sources to the overall microbial community in Holmes Lake.

Streambed Sediment

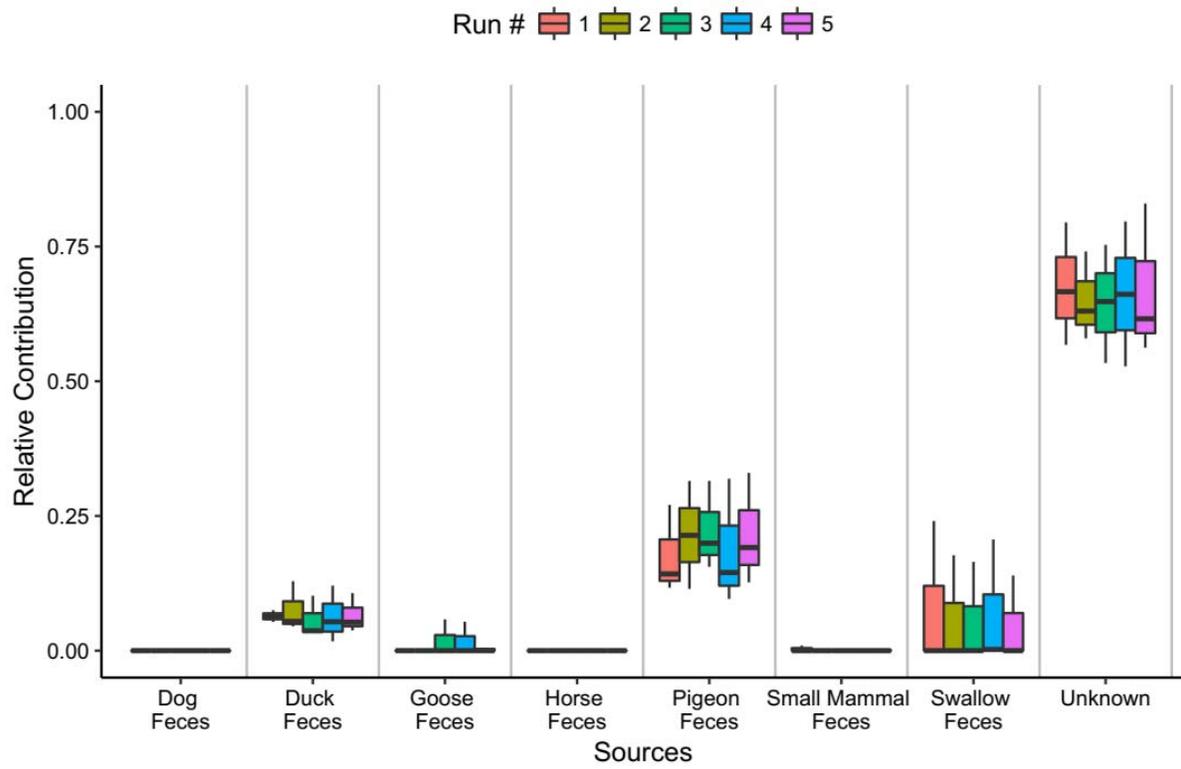

70

71 Figure S11: Five runs of SourceTracker analysis showing the relative contributions of potential

72 fecal sources to the overall microbial community in streambed sediment.

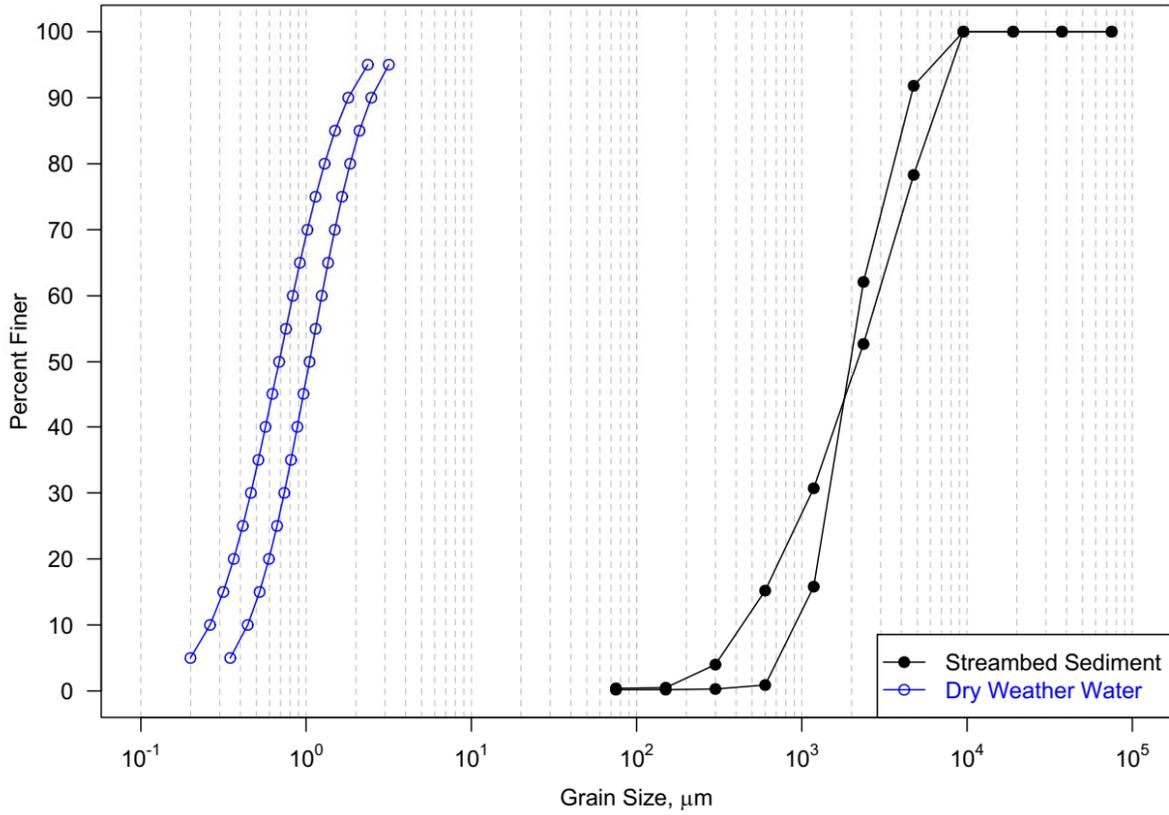

Street Sweepings

73

74 Figure S12: Five runs of SourceTracker analysis showing the relative contributions of potential

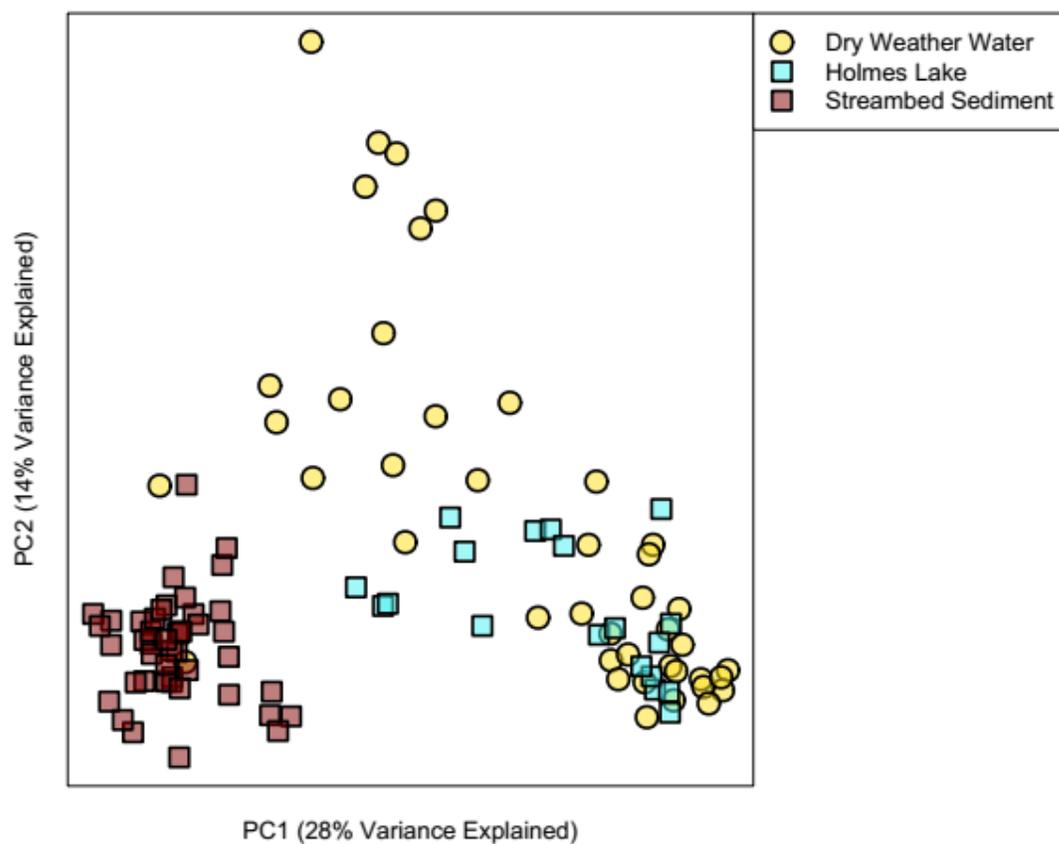

75 fecal sources to the overall microbial community in street sweeping.

76

77 Figure S13: Particle size analysis for typical dry weather water and streambed sediment samples

78 from Antelope Creek.

79

80 Figure S14: Principal coordinate analysis plot based on weighted UniFrac distance showing the
81 relationship among the microbial communities in one sink environment (dry weather water) and
82 two source environments (upstream reservoir Holmes Lake and streambed sediment).
