

S4 Fig. Correspondence between the R292K resistance mutation as measured by mutation specific RT-PCR and Illumina next generation sequencing.

The relative proportion of the R292K resistance mutation detected in samples of all oseltamivir treated immunocompromised (grey circles) and immunocompetent (open squares) ferrets inoculated with A/NL/16/98 (H3N2) as determined by mutation specific RT-PCR was compared to the relative proportion determined by Illumina NGS.
