

Habitat and landscape factors influence pollinators in a tropical megacity, Bangkok, Thailand

Supplemental Table S4. Details and results of the pollination network analysis.

Table S4a. Details and results of the pollinator taxa used in the pollination network. “Label” refers to the labels used for the pollinator taxa in the pollination network (Figure 3, S3). Degree refers to the number of floral hosts per pollinator taxa. Normalized degree is calculated as degree divided by the number of possible interacting partners, which accounts for differences in network size.
