CPMO: modern contraception; ANC4: Antenatal care (four or more visits); SBA: skilled birth attendant; DPTV: DPT vaccine.

## Panel - Ethnic groups in Suriname and Guyana

In contrast to the predominantly Spanish and Portuguese colonization in the 14 countries included in the present analyses, Guyana and Suriname were colonized by the British and Dutch, respectively, and as a result show different ethnic mixes. In both countries, it was possible to identify indigenous and afrodescendants women and children, but the reference group representing the rest of the population differed from those in the rest of the region.

In Suriname, the MICS questionnaire included eight options, with the respective proportions of women aged 15-49 years in the sample: Indian (30.1%), Javanese (14.1%), mixed race (10.1%), indigenous/Amerindians (4.0%), creole (17.2%), maroon (24.5%). Women who reported being (East) Indian, Javanese or of mixed race constituted the reference category.

The afrodescendants in Suriname consist out of two separate groups: maroon and creole. Where creoles are descendants from plantation slaves, and maroons, descendants from runaway slaves who formed independent settlements in the hinterland far from the cities.

At present creoles adapted western styles and live in urban areas and maroons live like the indigenous in their traditional way.<sup>1</sup> In the 1990s, political disturbances caused many maroons to move from their natural living areas to periurban slums.<sup>2-4</sup> These displaced maroon groups are socio-economically disadvantaged. Maroon women have high fertility rates, and reportedly benefit from delivering children across the border in the French Guiana where health care is free and child support is available; this may explain their low use of contraceptives. The table below shows coverage levels and 95% confidence intervals for maroon and creole women and children with the four interventions studied:

<b>Intervention</b>	<b>Maroon</b>	<b>Creole</b>
<b>Modern contraceptives</b>	27.3% (23.8 - 31.1)	42.7% (37.1 - 48.5)
<b>Antenatal care</b>	58.7% (54.1 - 63.1)	70.0% (58.5 - 77.9)
<b>Skilled attendant at birth</b>	88.1% (85.5 - 90.2)	97.1% (90.5 - 99.1)
<b>DPT3 vaccine</b>	61.9% (55.7 - 67.7)	52.0% (36.7 - 66.9)

Health services in the hinterland of Suriname are available through the medical mission, a government subsidized NGO established by missionaries which now serves tens of clinics. These provide primary health care staffed with health workers under the supervision of a physician through radio and monthly visits. This may explain the higher vaccine coverage among indigenous and maroon children than for the reference group.

In Guyana, four ethnic categories were recorded in the MICS questionnaire: East Indians (45.7%), mixed race (17.3%), Amerindians (6.8%) and African (30.2%). Guyana also has small numbers of Portuguese and Chinese descendants, who jointly account for about 3% of the population according to the most recent census. In the MICS database, these groups were included in the category of missing/ does not know/ other women, and were not included in the present analyses.<sup>5</sup>
