

Table S2. Amplitudes, durations and coefficients of variation of duplicate ECG measurements of bipolar limb leads (I, II, III) and a base apex lead in 20 neonatal diarrheic calves.

Variable	Lead II			Lead I			Lead III			Lead Base-Apex			<i>P</i> -value	
	Median	IQI	VI	Median	IQI	VI	Median	IQI	VI	Median	IQI	VI		
P amplitude (mV)	M1	0.18	0.15	0.83	0.16	0.11	0.69	0.06*	0.06	1.0	0.20	0.12	0.60	< 0.001
	M2	0.18	0.13	0.72	0.16	0.12	0.75	0.05*	0.06	1.2	0.20	0.13	0.65	< 0.001
R amplitude (mV)	M1	0.04	0.06	1.5	0.04	0.06	1.5	0.04	0.16	4.0	0.03	0.04	1.33	0.96

ST angle (°)	M1	3	2	0.67	1.5	3	2	2*	2.75	1.38	2.5	4.75	1.9	0.021
	M2	3	3.5	1.2	1.5	3	2	2	2.75	1.38	2	4	2.0	0.14
Ratio of T to S amplitude	M1	0.43	0.24	0.56	0.43	0.33	0.77	0.26*	0.51	1.96	0.44	0.22	0.5	0.057
	M2	0.41	0.25	0.61	0.41	0.31	0.76	0.20*	0.67	3.4	0.44	0.18	0.41	0.036

M1, measurement 1; M2, measurement 2; IQI, intraquartile interval; VI, variability index calculated as the ratio of the intraquartile interval to the median. Values with asterisks are significantly different from lead II measurements ($P \leq 0.0167$).

¹Median values of the S amplitude were multiplied with a factor of -1 for calculation of VI values.
