^aPollen pellets No. 8, 9, 17, 21, 23, and 24 showed no amplification in PCR.^bSubclade(s) within a monophyletic group were excluded. Floral and phenological information was confirmed by reference to the literature (Ohashi et al. 2015, 2016a, 2016b, 2017a, 2017b; Shimizu 2003).^cTogether with identification using ITS2, No. 22 was identified as *Rudbeckia laciniata* (see Table 1)
