Table S1. Overview of the average energy density of copepod species from Donnelly et al. (1994). All values were estimated using proximate composition (PC). *n* represents the number of samples measured. Where this expresses samples of pooled individuals, this is indicated with (p). The standard deviation is given where available (\pm).

Season	Location	<i>n</i>	Mean WW (g)	Water Content (%)	Mean energy density kJ g ⁻¹ WW	kJ g ⁻¹ DW	Method	Source
<i>Calanoides acutus</i>								
Autumn	Weddell Sea	2 (p)	0.20	86.0	2.51	17.57	PC	Donnelly et al. 1994*
Winter	Scotia Sea	2 (p)	0.78	84.2 \pm 0.1	2.51	15.48	PC	Donnelly et al. 1994
<i>Calanus propinquus</i>								
Autumn	Weddell Sea	2 (p)	0.19	74.0	5.44	21.34	PC	Donnelly et al. 1994
Winter	Scotia Sea	2 (p)	0.49	84.6 \pm 0.5	2.09	13.39	PC	Donnelly et al. 1994
<i>Euaugaptilis laticeps</i>								
Autumn	Weddell Sea	1 (p)	0.04	83.7	1.67	10.04	PC	Donnelly et al. 1994
<i>Paraeuchaeta antarctica</i>								
Autumn	Weddell Sea	1 (p)	0.22	79.3	4.60	21.76	PC	Donnelly et al. 1994
Winter	Scotia Sea	2 (p)	0.33	84.2 \pm 1.8	3.35	20.08	PC	Donnelly et al. 1994
<i>Euchirella rostromagna</i>								
Winter	Scotia Sea	1 (p)	0.15	84.5	1.26	9.20	PC	Donnelly et al. 1994
<i>Gaetanus tenuispinus</i>								
Autumn	Weddell Sea	1 (p)	0.25	85.0	1.67	12.13	PC	Donnelly et al. 1994
Winter	Scotia Sea	3 (p)	0.19	82.6 \pm 0.9	2.09	12.13	PC	Donnelly et al. 1994
<i>Heterorhabdus austrinus</i>								
Winter	Scotia Sea	1 (p)	0.22	88.7	1.26	12.13	PC	Donnelly et al. 1994
<i>Heterorhabdus farrani</i>								
Winter	Scotia Sea	1 (p)	0.17	89.5	1.26	12.13	PC	Donnelly et al. 1994
<i>Metridia gerlachei</i>								
Autumn	Weddell Sea	1 (p)	0.78	90.4	1.26	10.88	PC	Donnelly et al. 1994
Winter	Scotia Sea	1 (p)	0.46	91.0	0.84	9.62	PC	Donnelly et al. 1994
<i>Rhincalanus gigas</i>								
Autumn	Weddell Sea	1 (p)				12.55	PC	Donnelly et al. 1994
Winter	Scotia Sea	4 (p)	0.82	91.0 \pm 0.3	1.26	13.81	PC	Donnelly et al. 1994

* A factor of 4.19 was used to convert calories to joules

Table S2. Overview of the average energy density of amphipod species. Values were estimated using proximate composition (PC) and one using bomb calorimetry (BC). Energetic values in italics represent values that were converted using information from the given source. *n* represents the number of samples measured. Where this expresses samples of pooled individuals, this is indicated with (p). The standard deviation is given where available (\pm).

Season	Location	<i>n</i>	Mean size (mm)	Water Content (%)	Mean energy density kJ g^{-1} WW	Mean energy density kJ g^{-1} DW	Method	Source
<i>Cyphocaris faueri</i> (gammarid)								
Autumn	Weddell Sea	6	22.0	76.4 ± 5.8	2.42	<i>10.25</i>	PC	Torres et al. 1994*
<i>Cyphocaris richardi</i> (gammarid)								
Autumn	Weddell Sea	5	28.8	74.7 ± 2.5	2.92	<i>11.54</i>	PC	Torres et al. 1994

* A factor of 4.19 was used to convert calories to joules

Table S3. Overview of the average energy density of other crustacean species. All values were estimated using proximate composition (PC). Energetic values in italics represent values that were converted using information from the given sources. The mean size of the decapods and mysids represents the carapace length, for ostracods it represents the sphere diameter. *n* represents the number of samples measured. Where this expresses samples of pooled individuals, this is indicated with (p). The standard deviation is given where available (\pm).

Season	Location	<i>n</i>	Mean size (mm)	Water content (%)	Mean energy density kJ g^{-1} WW	Mean energy density kJ g^{-1} DW	Method	Source
<i>Pasiphaea scotiae</i> (decapod)								
Autumn	Weddell Sea	6	21.7	63.2 ± 2.7	8.40	<i>22.82</i>	PC	Torres et al. 1994*
Winter	Scotia Sea	8	21.3	63.3 ± 2.1	6.97	<i>19.00</i>	PC	Torres et al. 1994
<i>Petalidium foliacum</i> (decapod)								
Autumn	Weddell Sea	1	17.0	71.8	5.58	<i>19.77</i>	PC	Torres et al. 1994
Winter	Scotia Sea	3	13.3	67.4 ± 3.3	8.24	<i>25.27</i>	PC	Torres et al. 1994
<i>Boreomysis rostrata</i> (mysid)								
Winter	Scotia Sea	2	10.0	75.8 ± 0.9	4.40	<i>18.17</i>	PC	Torres et al. 1994
<i>Eucopia australis</i> (mysid)								
Winter	Scotia Sea	2	13.0	77.8 ± 1.8	5.32	<i>23.96</i>	PC	Torres et al. 1994
<i>Gnathophausia gigas</i> (mysid)								
Winter	Scotia Sea	4	16.8	69.4 ± 4.4	5.95	<i>19.43</i>	PC	Torres et al. 1994
<i>Conchoecia antipoda</i> (ostracod)								
Winter	Scotia Sea	1 (p)		87.8	1.67	<i>11.72</i>	PC	Donnelly et al. 1994*
<i>Conchoecia belgicae</i> (ostracod)								
Winter	Scotia Sea	1 (p)		85.9	1.26	<i>7.95</i>	PC	Donnelly et al. 1994
<i>Conchoecia hettacea</i> (ostracod)								
Winter	Scotia Sea	1 (p)		84.1	1.26	<i>7.11</i>	PC	Donnelly et al. 1994
<i>Gigantocypris mulleri</i> (ostracod)								
Winter	Scotia Sea	4	16.3	91.3 ± 0.4	0.70	<i>8.06</i>	PC	Torres et al. 1994

* A factor of 4.19 was used to convert calories to joules

Table S4. Average energy density of chaetognath, polychaete and a gastropod species. Energy densities in italics represent values that were converted using information from the given sources. *n* represents the number of samples measured. Where this expresses samples of pooled individuals, this is indicated with (p). Standard deviation is given where available. All measurements were done using proximate composition (PC).

Season	Location	<i>n</i>	Mean WW (mg)	Water content (%)	Mean energy density kJ g ⁻¹ WW	Method	Source
<i>Eukrohnia hamata</i>							
Autumn	Weddell Sea	1 (p)	0.455	95.0	0.42	7.53	PC
