

**S1 Table.** Assembling of plasmid pBS-M-P-act was performed by cloning fragments of the sequences of interest using total DNA extracts as PCR templates. The sequence analysis of the cloned sequences from the reared species listed below revealed a complete homology with the corresponding genes in database.

Gene fragment	Donor species used for cloning	Accession number of the corresponding gene in database	Percentage of homology determined by sequencing of the gene fragment
<i>Actin</i>	<i>Aedes albopictus</i>	DQ657949	100 %
<i>wMel-wsp</i>	<i>Drosophila melanogaster</i>	AF020064	100 %
<i>wPip-wsp</i>	<i>Culex pipiens pipiens</i>	AF301010	100 %
