

**Supplemental materials for
Hydrolase CehA and monooxygenase CfdC are responsible for the
degradation of carbofuran in *Sphingomonas* sp. strain CDS-1**

¹ Gene locus tags in GenBank database.

² Number of amino acids.

³ The top BLASTP hit was selected.

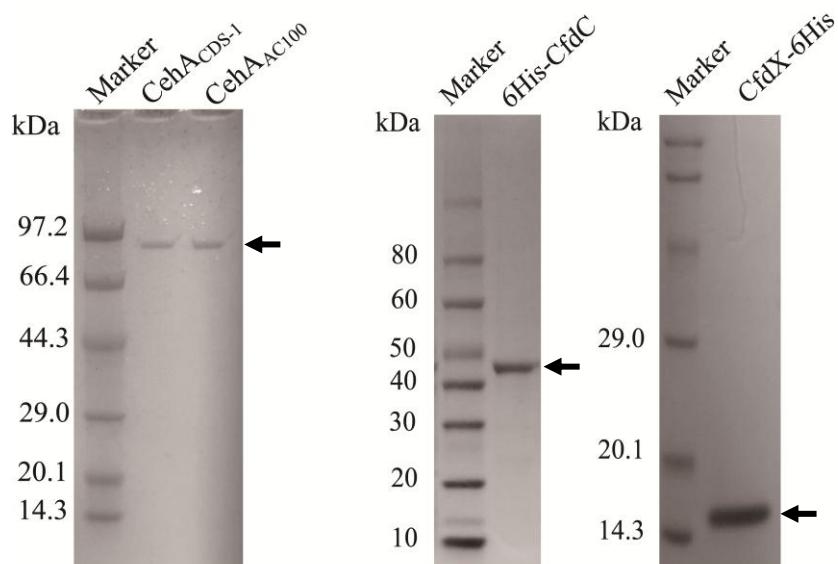

FIG S1 SDS-PAGE results for purified 6His-CehA_{CDS-1}, 6His-CehA_{AC100}, 6His-CfdC and CfdX-6His. 6His-CehA_{CDS-1}, 6His-CehA_{AC100}, 6His-CfdC and CfdX-6His were synthesized in *E. coli* and purified using Ni-NTA gravity column. The purified proteins were detected by 12% sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE).

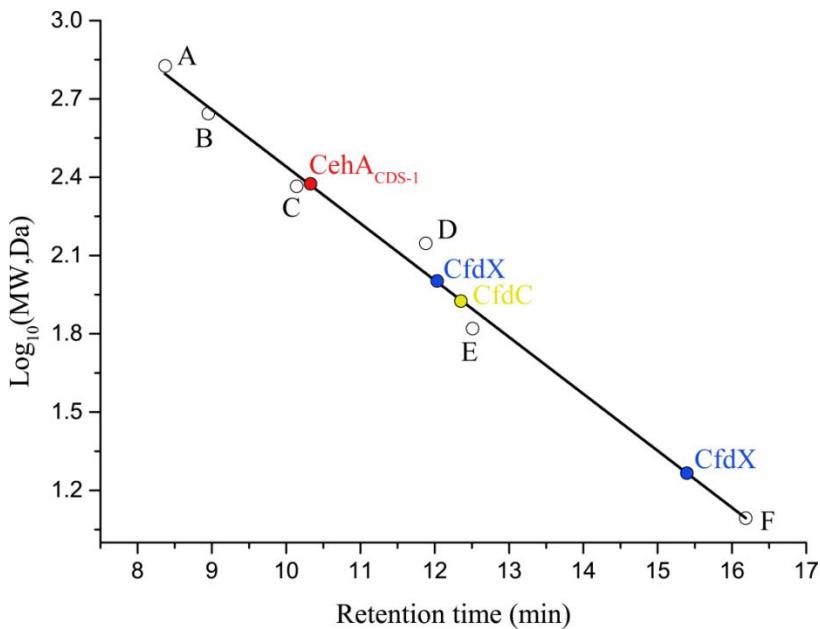

FIG S2 Determination of native molecular mass of 6His-CehA_{CDS-1}, 6His-CfdC and CfdX-6His based on a standard curve using gel filtration calibration kit. The standard proteins include: thyroglobulin from porcine thyroid (A, 669 kDa), ferritin from equine spleen (B, 440 kDa), catalase from bovine liver (C, 232 kDa), lactate dehydrogenase from bovine liver (D, 140 kDa), bovine serum albumin (E, 66 kDa), Cytochrome C (F, 12.4 kDa). According to the standard curve, native 6His-CehA_{CDS-1} is 221 kDa, native 6His-CfdC is 88 kDa, and native CfdX-6His has two forms, 106 and 18 kDa.
