

Figure S1. Knockout of GPRC5a suppressed chemotherapy drugs resistance in MIA PaCa-2 and TB32047 cells. (A) to (F) showed the statistical results of three independent experiments results of IC50 assay in MIA PaCa-2 and TB32047 cells. * P value < 0.05.

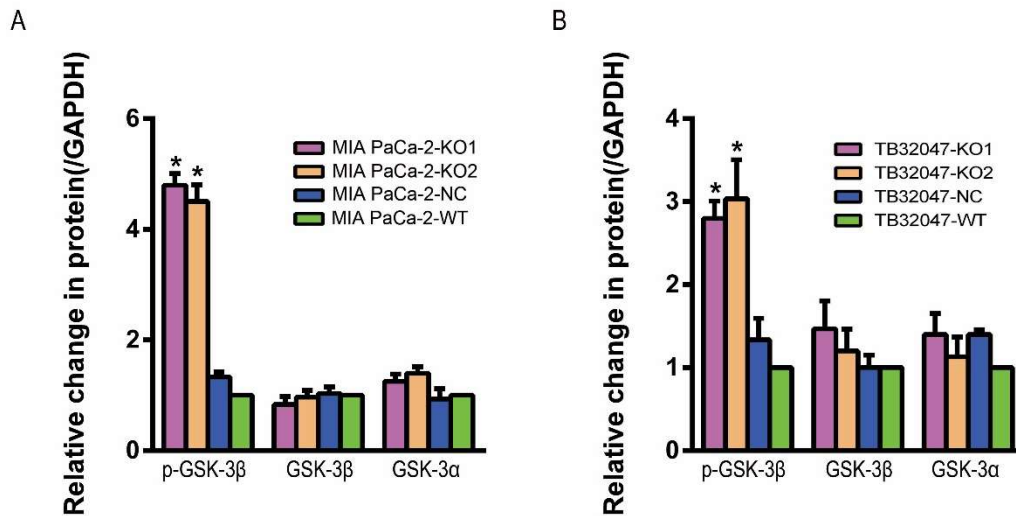

Figure S2. Knockout of GPRC5a promoted phosphorylation GSK-3β at Ser9. (A) and (B). The three independent experiments western blot results of GSK3 related proteins were quantified by densitometry in MIA PaCa-2 and TB32047 cells. * P value < 0.05.
