

**Supplemental Figure S2. RNA-seq analysis of *seb1-1*.** (left) RNA-seq volcano plots of log<sub>2</sub> fold changes in transcript levels in *seb1-1* compared to WT. 15 genes have significantly lower expression in *seb1-1* (blue dots); 9 genes have significantly higher expression in *seb1-1* (orange dots). padj = adjusted p-value obtained from DESeq2. (right) No significant changes in transcript levels were observed in factors known to play a role in heterochromatin formation.
