

Figure S8. PEGASOS recirculation procedure can be scaled up for clearing adult rat. (a, b). Adult rat of 12 weeks age before **(a)** and after **(b)** clearing following the PEGASOS recirculation procedure. An adult (6 weeks age) mouse and a pup (p7) mouse were placed on the left as the size controls after clearing. **(c-j).** Body parts and organs were dissected and imaged. Dotted lines outline the nearly invisible mandible within the BB-PEG clearing medium. Scale Bars, 1cm.
