

Supplemental Figure 2. Receiver operating characteristic (ROC) analysis. Capacity of PEDF and Chemerin plasma levels to discriminate between ERA patients with or without an overweight/obese status. The area under the curve (AUC) was 0.636 (95%CI=0.554-0.717, p=0.002) for Chemerin and 0.602 (95%CI=0.519-0.685, p=0.02) for PEDF.
