

**Checklist for Authors and Reviewers to
Maximize Reproducibility of Spiking Neural Network Models**

Make code available and executable	
<input type="checkbox"/>	Share the model of your code on a model hosting site (e.g. ModelDB, Open SourceBrain) or a general purpose service (e.g. GitHub, Bitbucket)
<input type="checkbox"/>	Provide an installation guide for all dependencies and the model itself
<input type="checkbox"/>	Use a version control system and tag the used version
<input type="checkbox"/>	Provide provenance tracking to explicitly declare versions of all used software

Make code comprehensible and testable	
<input type="checkbox"/>	Modularize the code
<input type="checkbox"/>	Encapsulate the code
<input type="checkbox"/>	Write flexible code
<input type="checkbox"/>	Apply unit tests
<input type="checkbox"/>	Comment the code with natural language
<input type="checkbox"/>	Use meaningful parameter names
<input type="checkbox"/>	Use parameter files containing all model parameters
<input type="checkbox"/>	Use tables to document all model parameters

Reduce risk of implementation dependencies	
<input type="checkbox"/>	Use standard tools wherever possible
<input type="checkbox"/>	Use standard numerics
<input type="checkbox"/>	Perform multiple realizations
<input type="checkbox"/>	Test model robustness

Version 1.0
26.06.2018

1 Supplementary Material

1.1 Changes to the original C++ code

To reproduce the results in the manuscript, we used the C++ implementation of the model `poly_spnet.cpp` from Izhikevich's website (<http://www.izhikevich.org/publications/spnet.htm>). Unfortunately, the C++ code can not be compiled with the standard g++ compiler under Ubuntu 16.04 LTS.

Following adaptations were made to compile the code:

- line 1: `#include <iostream.h>` -> `#$include <iostream>`
- change all occurrences of `'cout'` to `'std::cout'`
- line 764: `void main()` -> `int main()`

After successful compilation we had to fix a few runtime errors:

- Comment out line 955
- Comment out line 957

After these changes the simulation and analysis ran through but did not save the data about polychronous groups. To change this:

- Comment in line 691 to 697

To avoid the computation with shuffled data (and possibly overwriting data):

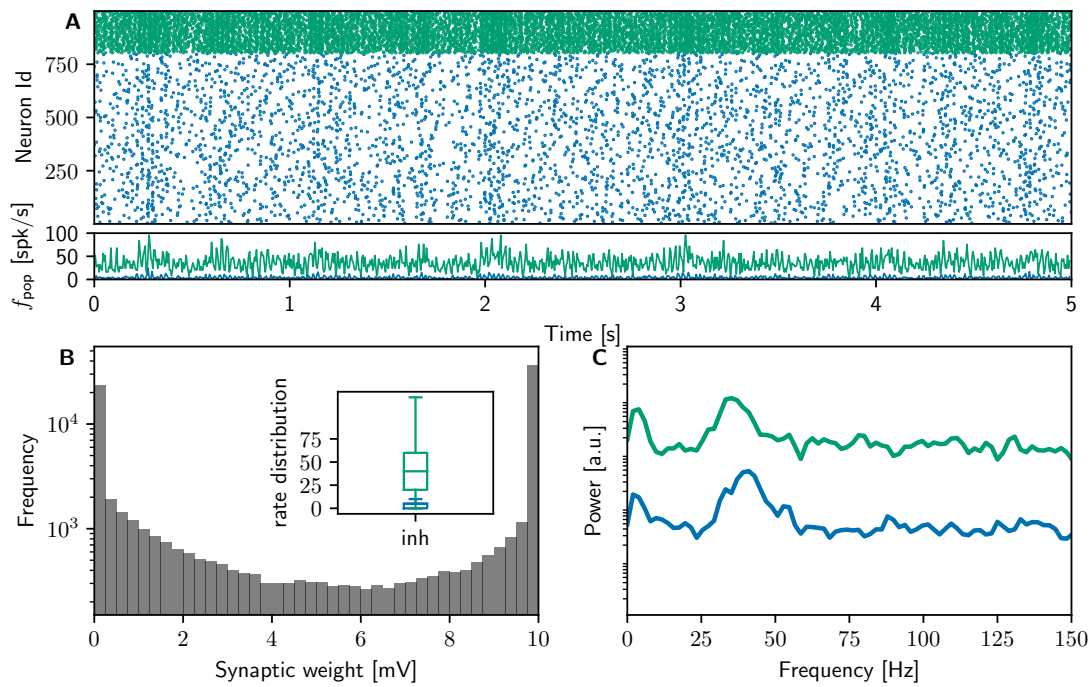

- Comment out line 957 to 960

2 Network Description

1 shows the parameter for the network model.

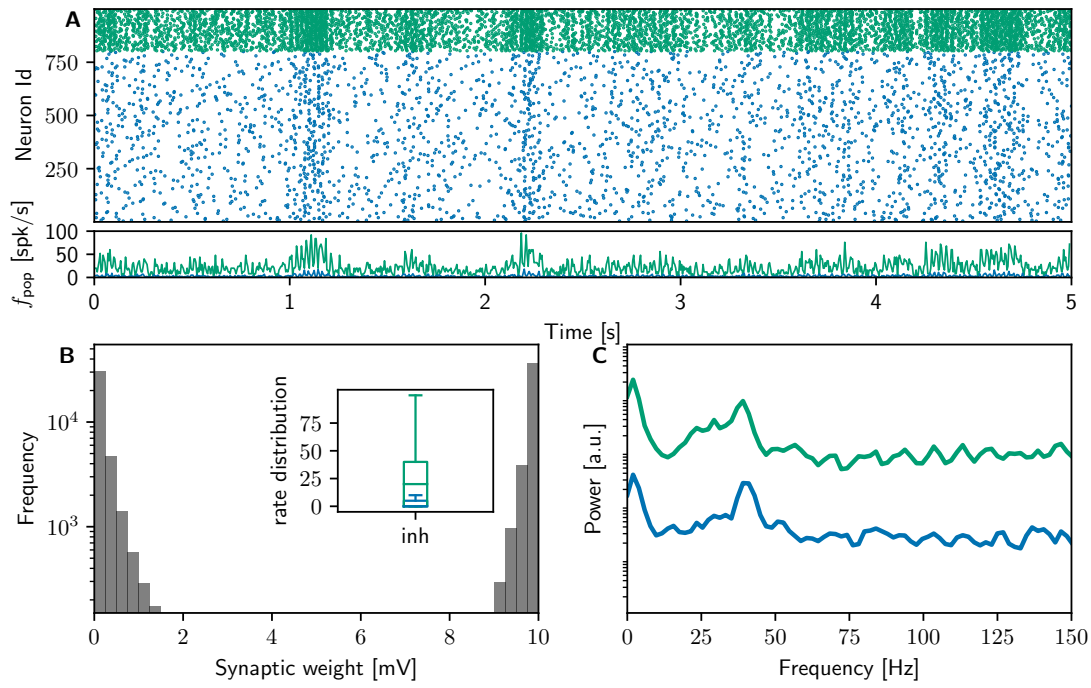

A		Model summary	
Populations	Two		
Topology	None		
Connectivity	Population specific		
Neuron model	Izhikevich		
Channel models	None		
Synapse model	δ current input		
Plasticity	Izhikevich STDP		
Measurements	Spike activity		
B		Populations	
Name	Elements	Size	
Exc	Izhikevich	800	
Inh	Izhikevich	200	
C		Connectivity	
Source	Target	Pattern	
Exc	Exc + Inh	Random, fixed-outdegree 100, plastic, initial weight 6	
Inh	Exc	Random fixed-outdegree 100, static, weight -5	
D		Neuron and synapse model	
Type	Izhikevich		
Dynamics	$v = v + h0.5(0.04V + 5)v + 140 - u + I + I_{syn}$ $v = v + h0.5(0.04V + 5)v + 140 - u + I + I_{syn}$ $u = u + ha(0.2vu)$		

Table 1: Description of the network model (according to Nordlie 2009).

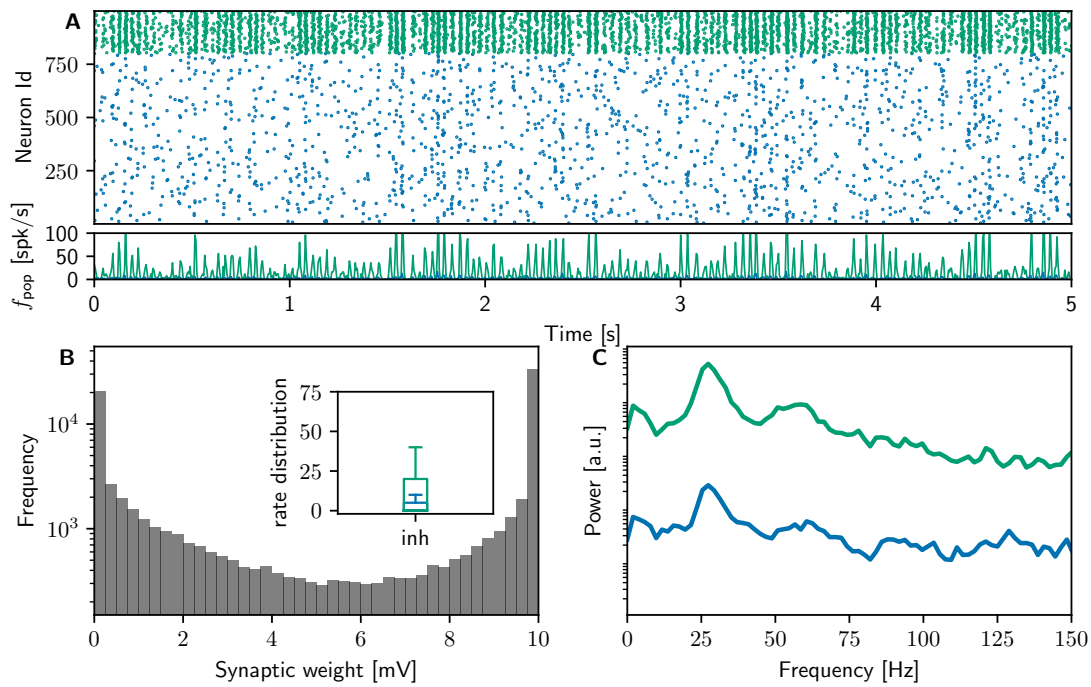

A simulation-params	
rec_spikes	10000.0
resolution	1.0
sim-time	18000000.0
rec_mem	0.0
synapse-update-interval	1000
neuron-integration-steps	1
data-path	data/NEST_model/
B stimulus	
rate	40.0
distribution	poisson
type	generate
weight	10.0
C plasticity	
W_inh	-5.0
synapse-model	stdp_izh_synapse
Wmax	10.0
W_init	6.0
LTP	0.1
