

## **Comparative proteomics of soluble factors secreted by human breast adipose tissue from tumor and normal breast**

### **SUPPLEMENTARY MATERIALS**

#### **Supplementary Table 1: Proteins detected for 3 hATT-CMs**

See Supplementary Table 1 in Supplementary Files

#### **Supplementary Table 2: Proteins detected for 3 hATN-CMs**

See Supplementary Table 2 in Supplementary Files

**Supplementary Figure 1: Array of 42 cytokines.** Dots from the array were measured by densitometry and relativized to control membrane. Bar chart shows relative fold change for each cytokines of hATN-CMs (n=5) and hATT- CMs (n=6).
