

Supplementary Data

Supplementary Figure S1. Synergistic effect of F13 + K17 and H17 + K17. Cytofluorimetric analysis of eGFP expression in HEK293 cells infected with dual AAV2 expressing eGFP and incubated with the various drugs either alone or in combination. Values ($n=3$), normalized to the corresponding DMSO sample, are presented as the mean \pm SE. Drug concentrations: F13 5 μ M, H17 3 μ M, and K17 0.3 μ M. * $p \leq 0.05$. AAV2, dual adeno-associated viral serotype 2; DMSO, dimethyl sulfoxide; eGFP, enhanced green fluorescent protein.
