

**Supplemental Information**

**An Observational Study from Long-Term AAV  
Re-administration in Two Hemophilia Dogs**

**Junjiang Sun, Wenwei Shao, Xiaojing Chen, Elizabeth P. Merricks, Lauren Wimsey, Yasmina L. Abajas, Glenn P. Niemeyer, Clinton D. Lothrop, Paul E. Monahan, R. Jude Samulski, Timothy C. Nichols, and Chengwen Li**

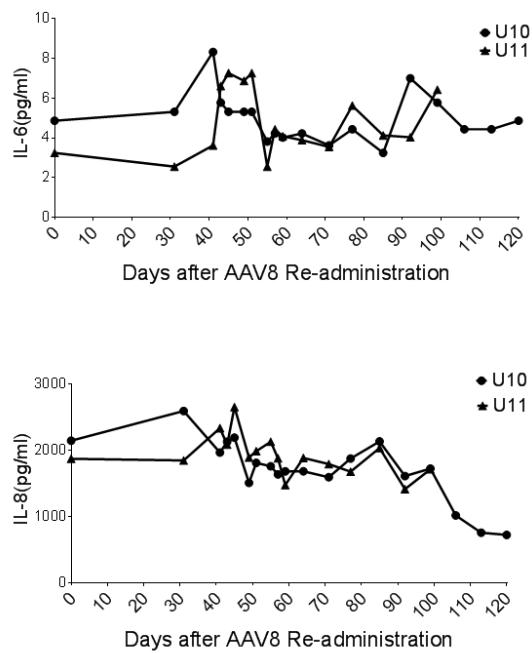

**Supplementary Figure 1**

**Supplemental Figure 1. Thromboelastography analysis after AAV8/hFVIII re-administration.**

Thromboelastometry analysis was performed at the defined time points after AAV8/hFVIII re-administration in hemophilia dogs U10 and U11. **(A)** Reaction time in minutes, **(B)** Kinetics time in minutes, **(C)**  $\alpha$  angle in degree, and **(D)** maximum clot firmness in mm. Dashed lines represented the normal range of each parameter.

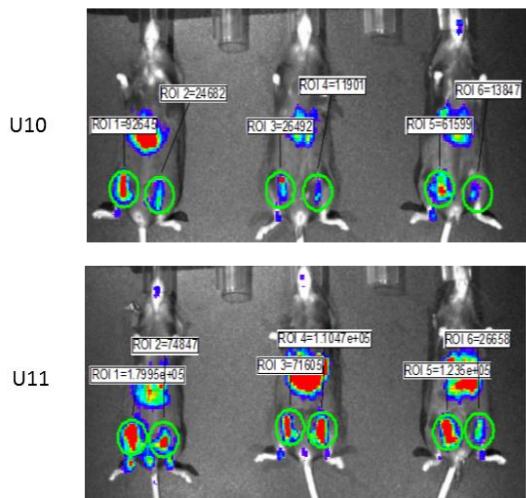

Supplementary Figure 2

**Supplemental Figure 2. The change of other cytokines IL-6, IL-8 after AAV8/hFVIII re-administration**

Dynamic changes of cytokines **IL-6 (A)**, **IL-8 (B)** were examined on the Luminex MAGPIX system from the plasma of the hemophilia dogs U10 and U11 after AAV8/hFVIII re-administration. Cytokines, IL-2, IL-18 and TNF- $\alpha$  were undetectable in most of the time points in both dogs U10 and U11.
