Power of HKG [x-fold]	1.26	1.22	9.92	1.01							

S4 Fig. Descriptive statistics of four candidate housekeeping genes (HKG) based on their crossing point (CP) values. BestKeeper index is computed together with the same descriptive parameters for four genes (UBQ10, GTPb, EF1 and Actin). Abbreviations: n: number of samples; geo Mean [CP]: the geometric mean of CP; ar Mean [CP]: the arithmetic mean of CP; Min [CP] and Max [CP]: the extreme values of CP; std dev [\pm CP]: the standard deviation of the CP; CV [%CP]: the coefficient of variance expressed as a percentage on the CP level; Min [x-fold] and Max [x-fold]: the extreme values of expression levels expressed as an absolute x-fold over- or under-regulation coefficient; std dev [\pm x-fold]: standard deviation of the absolute regulation coefficients.
