Supplemental Figure. 1 Distribution of Ab levels in the controls used to determine the cut-off for positivity (mean + 2SD). (A) Data for 30 Cameroonian male adults who had Ab to the merozoite antigens, but not FV2. (B) Data for 30 plasma samples collected at delivery from US negative control women who lacked Ab to the merozoite antigens. Cut-off values for Ab positivity for each antigen was, FV2:3709; AMA1:1138; EBA-175:739; MSP1₄₂:1153; MSP2:1042; MSP3:3850; MSP11:5046; Pf41:2563.
