

A**B**

Supplementary Figure 2. IOP measurements at 4, 10 and 24 hours after single or combined laser treatment in mice aged 5 or 8 weeks ($n = 12/\text{group}$). (A) IOP elevation after single or combined laser treatment, as compared with control contralateral eyes, in mice aged 5 or 8 weeks. *** $P < 0.001$. (B) No significant difference was found with single versus combined treatment. n.s.: not significant.
