

**Supplemental Figure 1.** Downregulation of PRMT1 expression attenuates the TGF- $\beta$ -induced EMT of HaCaT cells, as shown using two different siRNAs. (A, B) HaCaT cells, transfected with PRMT1 siRNA #4, PRMT1 siRNA #7, or control siRNA, were treated with TGF- $\beta$  for 48 or 72 h to induce EMT or were left untreated. The relative expression of PRMT1 (A) and PAI1 (B) mRNA was quantified by q-RT-PCR. \* p<0.05 and # p<0.0001 vs. control siRNA at the same time point. (C) Downregulation of PRMT1 expression following transfection with either PRMT1 siRNA #4 or PRMT1 siRNA #7 reduced the TGF- $\beta$ -induced increase in fibronectin expression and decrease in claudin1 expression.
