Supplementary figure 1. EXT/L protein expression

Representative immunoblots performed at least three times on cell lysates using the antibodies indicated above the blots. Proteins, approx. 40 µg, were separated on 10% SDS-polyacrylamide gels followed by transfer of proteins to nitrocellulose membranes and immunoblotting with the indicated antibodies. The following EXT antibodies were used; EXT1 (1:1000, mouse monoclonal #sc-515144, Santa Cruz Biotechnology); EXT2 (1:1000, mouse monoclonal #sc-514092, Santa Cruz Biotechnology); EXTL2 (1:1000, rabbit polyclonal #SAB1410351, Sigma-Aldrich) and EXTL3 (1:1000, goat polyclonal #AF2635, R&D-systems. Peroxidase-conjugated secondary goat anti-mouse and goat-anti rabbit IgG were from Santa Cruz Biotechnology. For positive controls EXT-overexpressing cells tagged with turboGFP (tGFP) or myc were used. Myc and tGFP tagged EXT-proteins were detected with anti-myc (1:1000, #087M4765v mouse monoclonal, Sigma-Aldrich) and anti-tGFP (1:1000, #TA150041 mouse monoclonal, ORIGENE), respectively. β-Actin (1:5000, mouse monoclonal #A5441) was from, Sigma-Aldrich. Blots were developed using ECL reagent (Pierce) and the bands visualized with a ChemiDoc XRS imaging system (Bio-Rad).

Note! The star denotes the unspecific 70-75 kDa band in the anti-EXT1 blot was also present in EXT1 deficient cells (data not shown). The arrowheads denote the EXT band.
