

**Supplementary Figure S1(A)** The first two principal components were calculated combining HapMap 3 individuals with the RE (Case) and NL4 (Control) datasets. **(B)** Individuals of non-European ancestry were removed if they were  $\pm 10$  s.d. from the HapMap CEU mean considering

the first four Principal Components (PCs). A subsequent removal of samples deviating by more than 5 s.d. from the stratum mean of the first two PCs was also performed (Calculated on Genotyped data only). **(C)** Individuals remaining after removing population outliers resulted in a homogenous European sample. **(D)** Individuals remaining after removing population outliers resulting in a homogenous group between the RE cases and NL4 datasets.

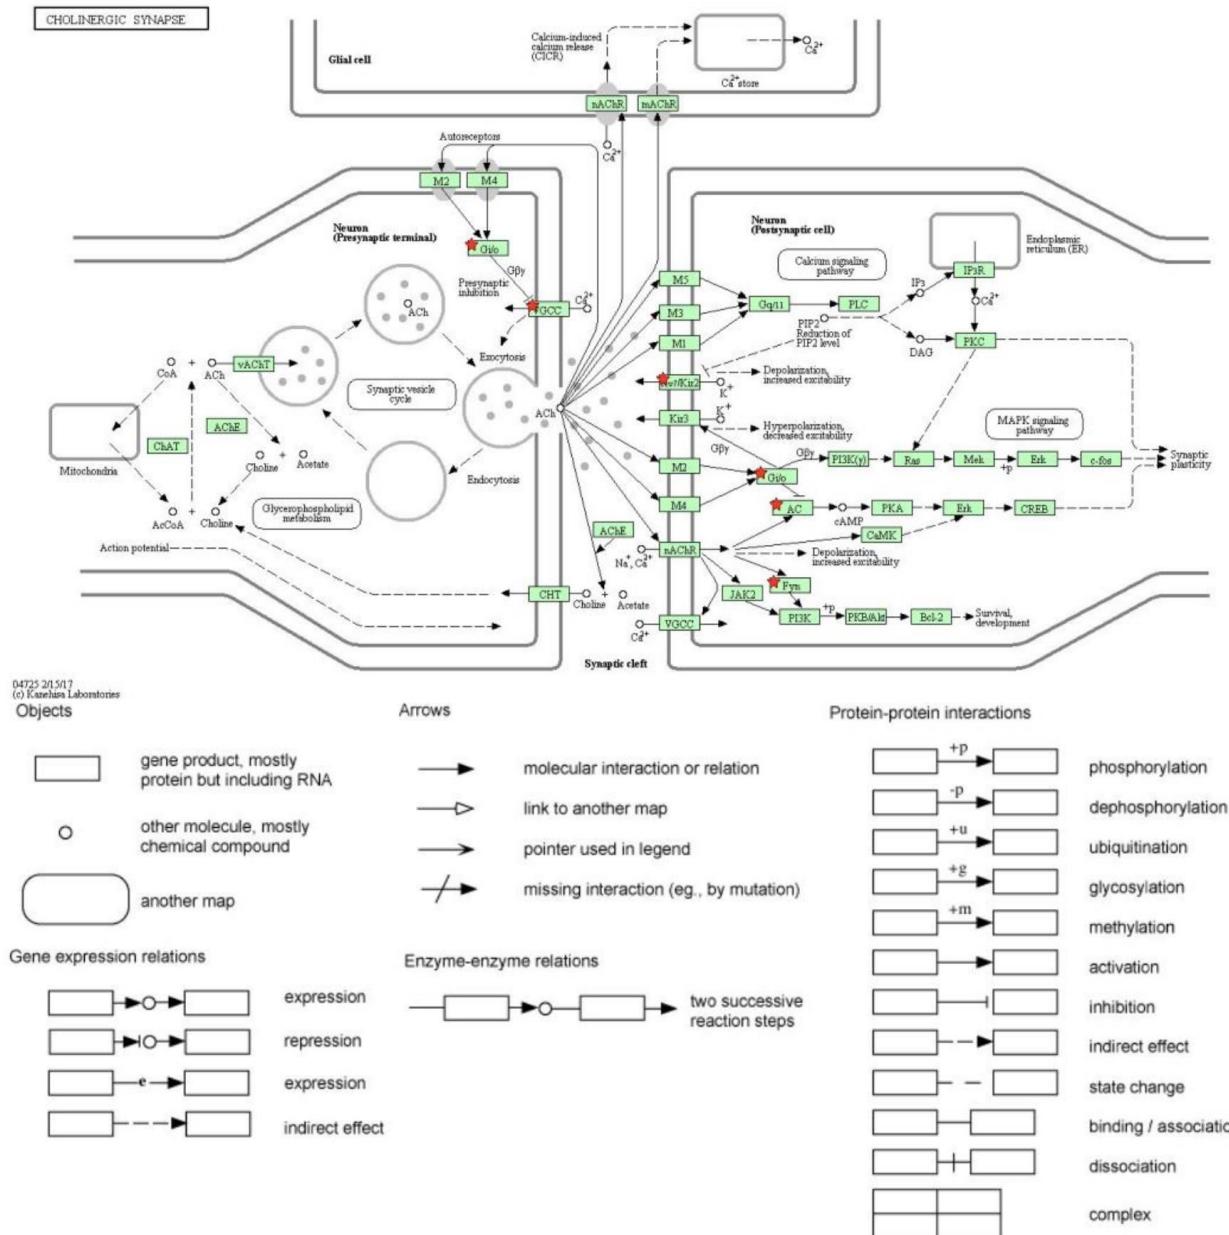

**Supplementary Figure S2 (cont. on next page).** Pedigree diagrams of families with RE and hotpost or rare CNVs where inheritance information was available. Circles indicate females, and squares males. Details of CNVs are found below individuals that carry that CNV.

**Supplementary Figure S3.** Ingenuity Pathway Analysis of genes disrupted by CNV from European RE cases with high brain expression, creating a network of up to 70 genes. White symbols are genes added by IPA during network generation due to direct physical, or indirect (e.g. via activation) interactions with the input list.

**Supplementary Figure S4.** KEGG pathway of cholinergic synapse from <http://www.kegg.jp/>. Red stars indicate genes that are from the IPA in Supplementary Figure 2. Enrichment analysis carried out within Enrichr <http://amp.pharm.mssm.edu/Enrichr/>.

**Supplementary Table S1**

Cohort	Sample Source	Original Sample (N)	Family Members (N)	Cases (N)	Controls (N)
RE	UK	537	412	125	-
NL4	The Netherlands	800	-	-	800

The original Dutch cohort included 2,262 controls (dataset NL4)<sup>1</sup>. 800 controls from this dataset were randomly selected and used in the present study.

**Supplementary Table S2**

Cohort	Individuals after QC			SNPs	
	Samples (N)	Cases (N)	Controls (N)	Before QC (N)	After QC (N)
RE	76	76	-	538,448	227,632
NL4	795	-	795	719,665	612,666

After Quality Control, a total of 222,612 SNPs overlapped between the two datasets. Only affected individuals from the RE dataset were included in the QC to determine the population structure.
