

Additional file 4 Effects of H₂O₂ on cell viability in SAECs.

Cells were incubated with 100 μM, 300 μM or 500 μM H₂O₂ for 6 h. Cell viability was assessed by measuring formazan production from viable cells (at 450 nm) as described in the Materials and Methods. Data are presented as means ± SD of three independent experiments. **p < 0.01 vs. control cells
