

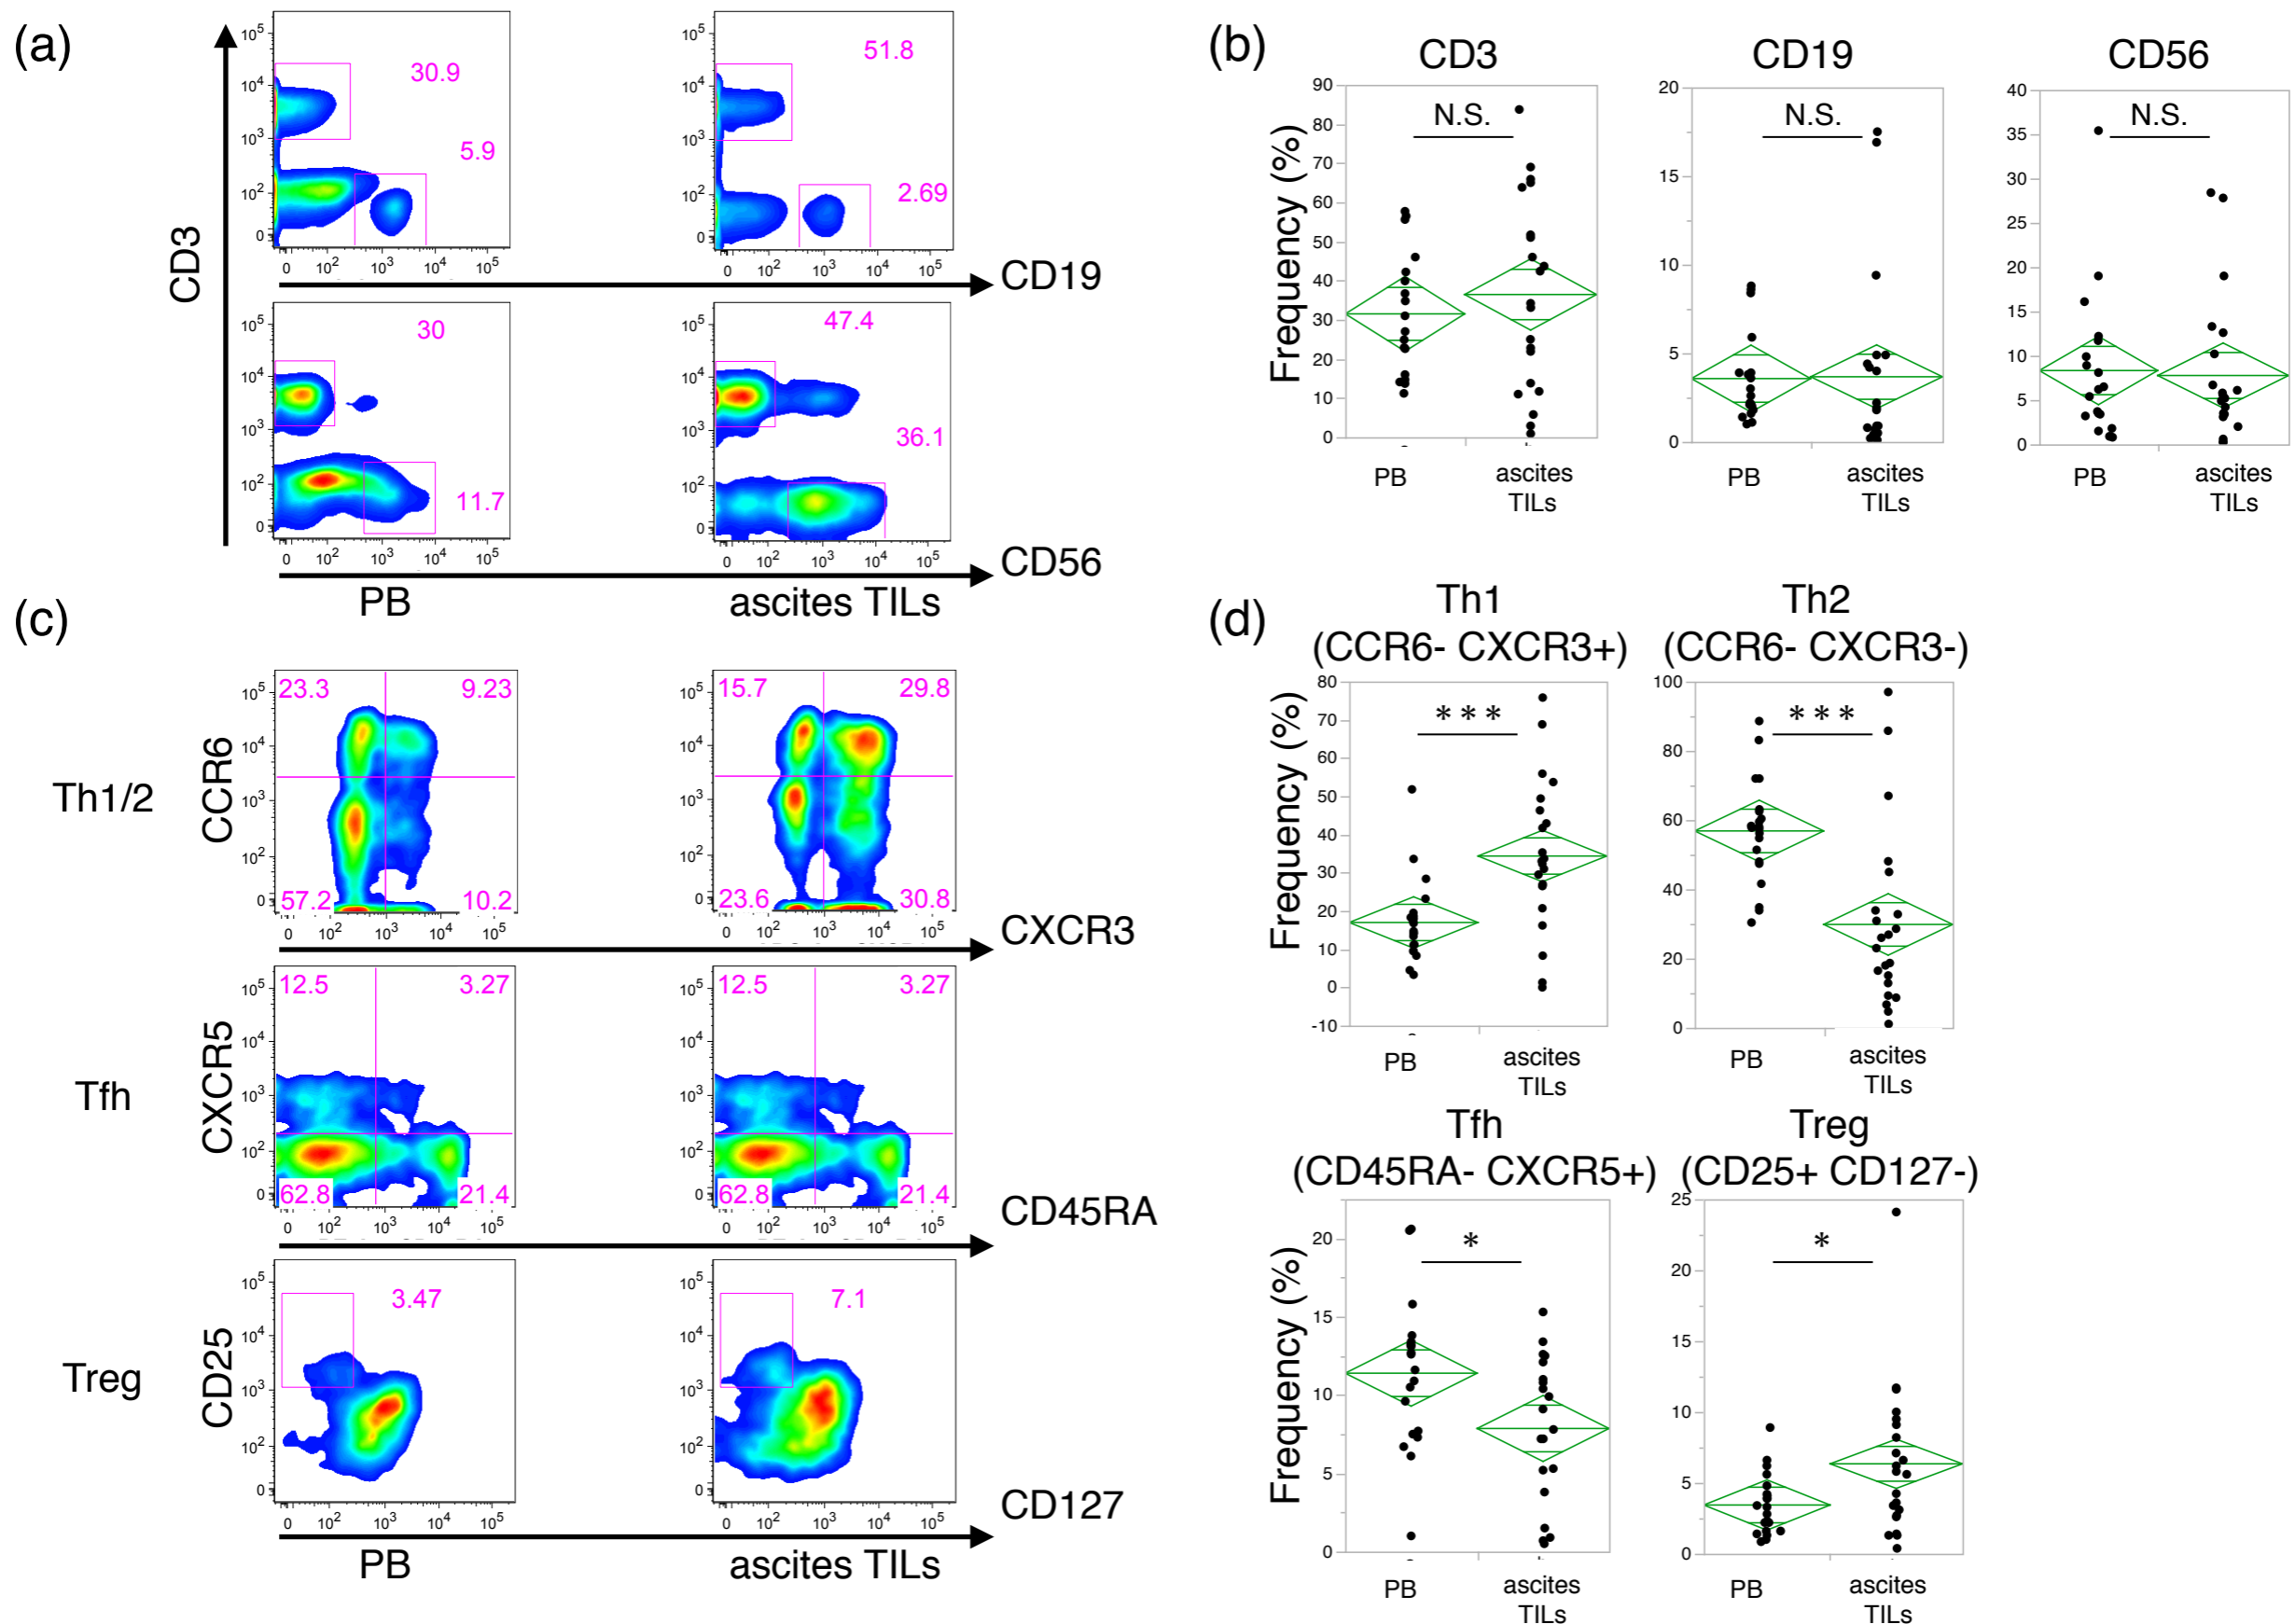

# Figure S1

Distinct characteristics of CD4+ and CD8+ ascites TILs regarding Th1/2, Tfh, and the other types of lymphocytes.

(a,c) Representative FACS plots of ascites TILs and paired-PB T cells showing the proportion of CD3/CD19/CD56, Th1/2, Tfh, and Treg (case 62). (b, d) Summarized dot plots of the frequency of CD3/CD19/CD56, Th1/2, Tfh, and Treg among ascites TILs and paired-PB T cells (n=22). Median values and 95% confidence interval (CI) are shown with diamond (\*p< 0.01; \*\*\*p < 0.001; N.S, no significance).
