YMTHE, Volume 26

Supplemental Information

AAV5-miHTT Gene Therapy Demonstrates Broad

Distribution and Strong Human Mutant Huntingtin

Lowering in a Huntington's Disease Minipig Model

Melvin M. Evers, Jana Miniarikova, Stefan Juhas, Astrid Vallès, Bozena Bohuslavova, Jana Juhasova, Helena Kupcova Skalnikova, Petr Vodicka, Ivona Valekova, Cynthia Brouwers, Bas Blits, Jacek Lubelski, Hana Kovarova, Zdenka Ellederova, Sander J. van Deventer, Harald Petry, Jan Motlik, and Pavlina Konstantinova

Table S2. Hematology of individual tgHD minipigs

WBC, white blood cells; RBC, red blood cells; HGB, hemoglobin; HCT, hematocrit; MCV, mean corpuscular volume; MCH, mean corpuscular hemoglobin; MCHC, mean corpuscular hemoglobin

concentration; PLT, platelets; LYMPH, lymphocytes; MONO, monocytes; EOS, eosinophils; BASO, basophils; NEUT, neutrophils.

Fig. S1. AAV5-GFP vector DNA copies peripheral tissues after intrathecal and intracranial delivery. Tested organs: liver, kidney, and adrenal glands. Dotted lines represent the lower limit of quantification.

Fig. S2. Longitudinal body weight of tgHD minipigs.

Fig. S3. AAV5-miHTT distribution and miHTT expression three months after putaminal and thalamic injection in healthy minipig brain: putamen, caudate nucleus, thalamus and cortex. One punch was taken per hemisphere per brain structure. (**A**) Vector DNA copies ($gc/\mu g$ DNA) per brain punch. (**B**) Mature miHTT expression, values are represented as molecules per cell. (**C**) Correlation analysis graph plotting vector DNA and miHTT expression from matching brain region. Data from dissected regions from AAV5-miHTT treated animals were evaluated with non-linear regression log-log line with ordinary fit and Pearson correlation. Formulation buffer samples were excluded from the correlation and fit. Dotted lines represent lower limit of quantification.

Fig. S4. Porcine HTT mRNA expression in the tgHD minipig brain: putamen, caudate nucleus, thalamus and cortex. Expression levels normalized to porcine GAPDH and relative to average of formulation buffer treated samples. No significant differences were found between the groups in any of the brain regions studied (one-way ANOVA).

Fig. S5. ELISA of longitudinal hemoglobin (Hb) levels in tgHD minipig CSF samples.
